

**FUJITSU DL6400/DL6600  
DOT MATRIX PRINTER  
USER'S MANUAL**

1

2

3

---

## **PREFACE**

You have made a wise choice in purchasing the DL6400/DL6600 printer.

To ensure that you get the maximum performance from your printer, read this manual before attempting to use the printer.

The printer has an LED or LCD control panel. This manual describes the operation of the printer with the LED control panel. For the operation of the printer with the LCD control panel, see Appendix E.

---

## Federal Communications Commission Radio Frequency Interference Statement for United States Users

**Notice:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**FCC WARNING:** Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment was tested as model number M3390A/M3391A.

### Notes:

1. The use of a nonshielded interface cable with the referenced device is prohibited. The length of the parallel interface cable shall not exceed 3 meters (10 feet). The length of the serial interface cable shall not exceed 15 meters (50 feet).
2. The length of the power cord shall not exceed 3 meters (10 feet).

---

### **Notice to Canadian Users**

This digital apparatus does not exceed the class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de la classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

### **Notice to German Users**

Bescheinigung des Herstellers/Importeurs

Hiermit wird bescheinigt, daß der/die/das

- M3390B/M3391B

in Übereinstimmung mit den Bestimmungen der

- AmtsblVfg 243/1991

funk-entstört ist.

Der Deutschen Bundespost wurde das Inverkehrbringen dieses Gerätes angezeigt und die Berechtigung zur Überprüfung der Serie auf Einhaltung der Bestimmungen eingeräumt.

Maschinenlärminformationsverordnung 8. GSGV, 18. 01. 1991: Der höchste Schalldruckpegel beträgt 70 dB (A) oder weniger gemäß ISO 7779.

---

The contents of this manual may be revised without prior notice to incorporate changes and improvements for units already shipped.

Every effort has been made to ensure that the information included here is complete and accurate at the time of publication. However, Fujitsu cannot be held responsible for errors or omissions.

Printer model specifications differ with the power supply input voltage (100 to 120 or 220 to 240 VAC).

## CHAPTER

## 1

## Introduction

### Overview

The DL6400/DL6600 is a 24-dot impact printer used for image and graphics reproduction.

Figure 1-1 shows the printer.

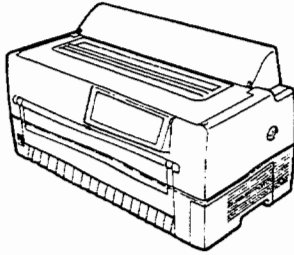

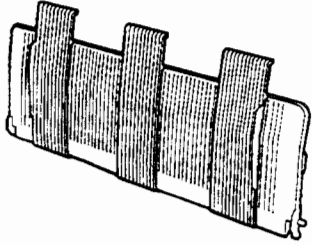

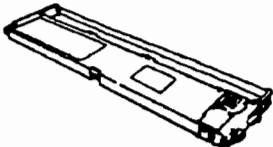

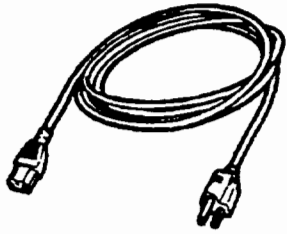

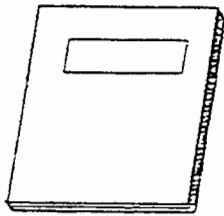

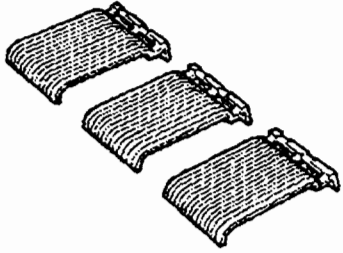

*Figure 1-1 DL6400/DL6600 printer*

**Components**

Check that the printer package contains the items shown in Figure 1-2.  
For missing items, contact the Fujitsu sales department.

**Table 1:**

<b>Printer</b>	<b>Platen knob</b>	<b>Paper guide</b>
		
<b>Ribbon cassette</b>	<b>Power cord</b>	<b>User's manual</b>
	Maximum length 3 meters 	
<b>Paper guides</b>		
		

**Figure 1-2 Components**

## Parts and Functions

Figures 1-3 and 1-4 show the printer parts.

The numbers in the figures correspond to the parts listed in Table 1-1.

### FRONT

### BACK

**Figure 1-3 Parts (1)**

**Figure 1-4 Parts (2)**

Table 1-1 lists the printer parts and functions.

**Table 1-2 Printer parts and functions**

Number	Part	Function
①	Top cover	Protects the print head and other internal printer components.
②	Back cut-sheet guides	Guides paper into the printer. Set based on the cut-sheet or continuous forms width.
③	Paper guide	Set down for continuous forms and up for cut sheets.
④	Paper cutter	Cuts continuous forms.
⑤	Platen knob	Turned to feed paper manually.
⑥	Control panel	Contains the switches and status lamps used to operate the printer.
⑦	Cut-sheet tray	Supports cut sheets during feeding.
⑧	Front tray	Holds cut sheets for insertion into the printer. Open for cut sheets and closed for continuous forms.
⑨	Front cut-sheet guide	Set based on the cut-sheet width to guide paper into the printer.
⑩	Power switch	Set to "I" to turn power on and to "O" to turn power off. When power is on, the power lamp is on.
⑪	Front cover	Protects components inside the printer. Opened to replace continuous forms.
⑫	Back auxiliary cover	Protects components inside the printer. Opened to replace continuous forms.
⑬	Power cord connector	Power cord connection.
⑭	Interface cable connector	Cable connection between the printer and processor.
⑮	Cut-sheet feeder connector	Cable connection between the printer and the optional cut-sheet feeder.
⑯	Back cover	Removed when the optional cut-sheet feeder is installed.

**Table 1-2 Printer parts and functions (Continued)**

<b>Number</b>	<b>Part</b>	<b>Function</b>
⑰	Ribbon cassette	Contains the printing ribbon. If characters do not print clearly, replace the ribbon or cassette. A Fujitsu ribbon is recommended.
⑱	Print head	Performs actual printing.
⑲	Platen	Controls and feeds paper.
⑳	Paper thickness lever	Used to manually adjust paper thickness.
㉑	Jam removal lever	Turned down to allow jammed paper to be removed more easily.
㉒	Lock lever	Locks the tractor.
㉓	Tractor	Feeds continuous forms.
㉔	Center guide	Controls continuous forms feeding.

## Setting Up the Printer

### Removing the Stopper and Cushion

The printer is shipped with a stopper and cushion inside that prevent vibration and other movement that could cause damage during shipment.

1. Open the top cover and lift out the stopper as shown by the arrow in Figure 2-1.

**Figure 2-1** Removing the stopper

2. Open the front cover and cut-sheet tray and remove the cushion from between the tractor shafts (Figure 2-2).

**Figure 2-2** Removing the cushion

3. Check that the jam removal lever is locked.

## **Installing the Paper Guide**

Insert the paper guide, at an angle, into the left and right guide grooves on the back cover and slide it back into place (Figure 2-3).

**Figure 2-3** *Installing the paper guide*

**Installing the  
Platen Knob**

Insert the platen knob and align it with the gear teeth (Figure 2-4).

**Figure 2-4** *Installing the platen knob*

**Connecting the Power Cord**

1. Turn off printer power (○).
2. Connect the power cord to the connector on the back of the printer, at the right side (Figure 2-5).
3. Plug the power cord into an outlet.

**Figure 2-5 Connecting the power cord**

**Connecting the  
Interface Cable**

1. Turn off printer and processor power.
2. Connect the interface cable to the connector at the back of the printer, on the left side (Figure 2-6). Make sure the orientation is correct. Press the left and right lock pins down to secure the cable.
3. Connect the cable to the computer. For more information, refer to the computer user's manual.

**Figure 2-6** *Connecting the interface cable*

## Installing the Ribbon Cassette

The ribbon cassette contains a folded ribbon. Handle the ribbon cassette carefully to ensure that the ribbon is not disordered or damaged.

**Note:**

A Fujitsu ribbon cassette is recommended. Other cassettes may cause operating problems or damage the print head. Fujitsu takes no responsibility for print head faults caused by such cassettes.

### Choosing a Cassette

Use a cassette or subcassette (ribbon only) listed in Table 3-1.

**Table 3-1** *Ribbon cassette and subcassette*

Product	Product number	Product description
Ribbon cassette	CA02460-D115	Ribbon in cassette
Subcassette	CA02460-D215	Ribbon only

## Preparing the Ribbon Cassette

1. Remove the two protective tabs used in shipment.
2. Release the ribbon lock to press the Lock tabs B.
3. Turn the knob clockwise to check that the ribbon moves smoothly.

**Figure 3-1** *Preparing the ribbon cassette*

---

**Note:**

Adjust the paper thickness lever on the printer appropriately for the forms used. Otherwise, the ribbon may come loose or paper may be smeared by ink from the ribbon.

---

**Installing the Ribbon Cassette**

1. Turn off printer power (○).
2. Open the top cover of the printer and move the paper thickness lever to D (Figure 3-2).
3. Manually move the print head to the left side so that it is one third of the printer width from the left side.

Installing the Ribbon Cassette

**Figure 3-2 Installing the ribbon cassette (1)**

4. Align the pins on both ends of the ribbon cassette with the guide grooves inside the printer. Then press the ribbon cassette down to install it (Figure 3-3).

**Figure 3-3 Installing the ribbon cassette (2)**

5. Hook the ribbon over the ribbon guide (Figure 3-4).
6. Turn the ribbon cassette knob clockwise to remove any slack.

**Figure 3-4 Installing the ribbon**

7. Close the top cover of the printer.

## Removing the Ribbon Cassette

1. Turn off printer power (○).
2. Open the top cover of the printer.
3. Remove the ribbon from the ribbon guide.
4. Pull the ribbon cassette towards you to unlock it and remove the cassette from the printer (Figure 3-5).

Installing the  
Ribbon Cassette

Figure 3-5 Removing the ribbon cassette

## Replacing the Subcassette

The ribbon can be replaced up to five times before the entire ribbon cassette itself must be replaced.

**Note:**

A Fujitsu ribbon cassette is recommended. Other cassettes may cause operating problems or damage the print head. Fujitsu takes no responsibility for print head faults caused by such cassettes. Replace the cassette carefully to avoid getting ink on your hands.

Replace the ribbon as follows:

1. Turn off printer power (O).
2. Remove the ribbon cassette from the printer as explained in "Removing the Ribbon Cassette" on page 3-4.
3. Sequentially press each of the four lock tabs A in Figure 3-6 in the directions of the arrows, starting from either end. Then open the cassette lid.

**Figure 3-6** Opening the cassette lid

4. Press feed roller A in Figure 3-7 in the direction of the arrow until it clicks into place. This procedure loosens the ribbon holder.

5. Lift the reverse guide and remove the old ribbon.

Installing the  
Ribbon Cassette

**Figure 3-7 Removing the old ribbon**

6. When loading the new subcassette into the ribbon cassette check that the orientation of the new subcassette is correct. After loading remove the paper tape.
7. Holding the subcassette casing, slide the bottom of the casing to the right to remove it (Figure 3-8).

**Figure 3-8 Installing the new ribbon**

8. Route the ribbon through paths A and B in Figure 3-9 and insert the reverse guide.

**Figure 3-9 Ribbon paths (1)**

9. Thread the ribbon through the cassette as shown by the dotted line in Figure 3-10. Then raise the casing to remove it.

**Figure 3-10 Ribbon paths (2)**

10. Press lock tabs B in Figure 3-11 in the direction of the arrows to return feed roller A to its original position. Then close the cassette lid. Turn the knob clockwise to check that the ribbon moves smoothly.

**Figure 3-11 Unlocking tabs and checking ribbon movement**

11. Check off the subcassette replacement column on the printers label.
12. Install the cassette (see "Installing the Ribbon Cassette" on page 3-3).

## Loading Continuous Forms (Front)

### Loading Paper

Loading Paper

1. Turn on the printer power switch (1).
2. Press the PAPER PATH button on the control panel to select FRONT TRACTOR. The FRONT TRACTOR lamp lights.
3. Move the paper guide back as indicated by the arrow in Figure 4-1. (See "Installing the Paper Guide" on page 2-2.)
4. Open the front cover of the printer.

**Figure 4-1** Loading continuous forms

5. Raise the cut-sheet tray.
6. Turn the lock levers of the left and right tractors in the direction indicated by the arrow in Figure 4-2 to unlock them.

**Figure 4-2 Cut-sheet tray and lock-lever release**

7. Move the left tractor to the reference point on the lower cover. Then press the lock lever in the direction of the arrow in Figure 4-3 to lock it.
8. Move the right tractor in alignment with the paper width.
9. Adjust the center guide to the paper width to remove slack in the paper.

**Figure 4-3 Adjusting the left and right tractors and center guide**

10. Open the paper holders of the left and right tractors. Align the forms feed holes with the tractor pins and close the paper holders (Figure 4-4).

**Figure 4-4 Loading continuous forms and closing paper holders**

11. Move the right tractor to add slight tension to the paper. Then press the lock lever in the direction of the arrow in Figure 4-5 to lock it.

**Figure 4-5 Adjusting paper tension (horizontal)**

12. Lower the cut-sheet tray (Figure 4-6).

**Figure 4-6 Lowering the cut-sheet tray**

13. Close the front cover of the printer (Figure 4-7).

**Figure 4-7 Closing the front cover**

14. Press the ONLINE button on the control panel to place the printer offline. The ONLINE lamp should not be lit.
15. Press the LOAD button (or LOAD/UNLOAD button) on the control panel to load a continuous form automatically.
16. Adjust the position of the print line

To adjust the print line to the position that you require, open the top cover of the printer and align the red mark of the indicator with the position you require the bottoms of characters to be (Figure 4-8).

- Fine forward feed: Holding the ONLINE button down, press the LF/FF button to feed paper forward in small increments.
- For the operation of the printer with the LCD control panel, see Appendix E.
- Fine reverse feed: Holding the ONLINE button down, press the TEAR OFF button to feed paper in reverse in small increments.

**Figure 4-8 Adjusting the print line**

17. Press the ONLINE button on the control panel to place the printer online. The ONLINE lamp lights.

**Loading  
Continuous  
Forms (Rear)**

Refer to the *Rear-Feed Tractor User's Manual* for information on the rear-feed tractor option.

**Cutting  
Continuous  
Forms**

Forms are cut at perforations 23.3 mm (11/12 inch) above the print head center when the print head center is on the sixth line. A single line feed is 4.2 mm (1/6 inch).

**Figure 4-9 Continuous forms cutting location**

1. Press the TEAR OFF button on the control panel. The continuous forms are then automatically loaded to where they are to be cut. For the operation of the printer with the LCD control panel, see Appendix E.
2. Open the noise-proof cover.
3. Check that the perforations are at the paper cutter.
4. Cut the continuous forms as shown in Figure 4-10.

**Note:**

Continuous forms cannot be cut where there are no perforations.

Loading Paper

**Figure 4-10** Cutting continuous forms

**Loading Cut Sheets**

1. Turn on printer power (1).
2. Press the PAPER PATH button on the control panel to select FRICTION (friction feed). The FRICTION lamp lights.
3. Raise the paper guide. (See "Installing the Paper Guide" on page 2-2.)

4. Open the front tray (Figure 4-11).

**Figure 4-11 Raising the paper guide and opening the front tray**

5. Align the cut-sheet guide with the reference point (Figure 4-12).

**Figure 4-12 Aligning the cut-sheet guide with the reference point**

6. Insert paper while aligning its left edge with the cut-sheet guide (Figure 4-13).

Loading Paper

**Figure 4-13 Loading cut sheets**

7. Press the LOAD button (or LOAD/UNLOAD button). The paper is then loaded to the print start position.

**Note:**

If paper is not loaded correctly, a paper feed error or skewed loading may occur. Once a cut sheet has been inserted, it is loaded automatically.

8. Adjust vertical printing as described in step 16. in “*Loading Continuous Forms (Front)*” on page 4-1.

## **Printing Cut Sheets**

You can print cut sheets without removing continuous forms from the tractor section.

1. Press the PAPER PATH button on the control panel to select FRICTION (friction feed). The FRICTION lamp lights.

---

### **Notes:**

1. Retract continuous forms, if any, from the paper path to the tractor section. The FRICTION lamp lights.
  2. If the lamp does not light to indicate FRICTION, continuous forms remain in the paper path. Cut the continuous forms and select FRICTION again.
- 

**Figure 4-14** *Using cut sheets with continuous forms loaded (1)*

2. Load cut sheets as explained in “*Loading Cut Sheets*” on page 4-7 without removing the continuous forms.

Loading Paper

**Figure 4-15** Using cut sheets with continuous forms loaded (2)

**Returning to Continuous Forms**

After printing cut sheets with continuous forms loaded, you can easily return to printing continuous forms.

1. Remove cut sheets, if any.
2. Tip back the paper guide.
3. Close the front tray as shown in Figure 4-16.
4. Press the PAPER PATH button on the control panel to select FRONT TRACTOR or REAR TRACTOR, whichever you want to use. The FRONT TRACTOR or REAR TRACTOR lamp lights. Continuous forms are then loaded automatically.

The REAR TRACTOR lamp is for the optional rear-feed tractor.

**Figure 4-16 Reloading continuous forms**

5. Check the vertical printing position. See “Loading Continuous Forms (Front)” on page 4-1.

## Operating the Printer

### Using the Control Panel

#### LED type control panel

##### 1. Layout

Figure 5-1 shows the LED type control panel layout.

**Figure 5-1 Control panel layout (LED type)**

##### 2. Lamps

Control panel lamps indicate the printer status.

Table 5-1 lists the lamp functions.

**Table 5-1 Lamp functions (LED type)**

Lamp <sup>*1</sup>	Function
ONLINE	Lights when the printer is online.
PAPER OUT (amber)	Changes to red when a paper outage is detected.
1	Lights when MENU 1 is selected. Switched by pressing the MENU button.
2	Lights when MENU 2 is selected. Switched by pressing the MENU button.

**Table 5-1 Lamp functions (LED type) (Continued)**

Lamp*1	Function
FRICTION	Lights when cut sheets can be used. Switched by pressing the PAPER PATH button.
FRONT TRACTOR	Lights when the FRONT tractor can be used for continuous forms. Switched by pressing the PAPER PATH button.
REAR TRACTOR	Lights when the REAR tractor can be used for continuous forms. Switched by pressing the PAPER PATH button.
LOCKED	Lights when lock mode is on. Switched by pressing the LOCK button.
COUR10 PRESTG12 COMPRESS17 Bold PS Time PS N. Sans PS DRAFT10 DRAFT12 MENU FONT	Fonts are selected by pressing the FONT button. The selected FONT lamp lights: Courier (10 cpi) Prestige Elite (12 cpi) Compression (17 cpi) Boldface (proportional spacing) Timeless (proportional spacing) Nimbus Sans (proportional spacing) Draft (10 cpi) Draft (12 cpi) The font selected in menu mode becomes valid in this state.

\*1 Lamps glow green unless otherwise indicated.

### 3. Buttons (when printer is online)

**ONLINE:** Places the system offline after it prints the current line.

**LF/FF:** Line feed/forms feed button. Feeds forms forward. Pressing this button continuously for 3 seconds or more feeds lines forward to the feed point for the next page (forms feed).

When the cut-sheet feeder is used, pressing this button continuously for 3 seconds or more unloads forms. If forms are not at the platen, forms are not loaded, but a line feed occurs.

**TEAR OFF:** Places the system in tear off mode and feeds lines to the forms cutting point. Tear off mode is valid for continuous forms only.

When this button is pressed, the printer performs centering, and the ONLINE lamp blinks.

If any button is pressed after forms are cut, the buzzer sounds, the ONLINE lamp stops blinking, and forms are fed back to their previous location.

**LOAD:** Loads or unloads forms as follows, depending on the situation:

- Continuous forms at the platen  
Forms are fed backward on the tractor until a paper outage is detected. If a paper outage has not been detected when forms have been fed 22 inches, forms feeding stops.
- Cut sheets at the platen  
Cut sheets are unloaded if printing has not started, and the TOP MARGIN value is made the current vertical location.
- Cut-sheet feeder set and cut sheets at the platen  
Cut sheets are unloaded if printing has not started, and the next cut sheet is loaded from the cut-sheet feeder. The TOP MARGIN value is made the current vertical location.
- Continuous forms or cut sheets being used, cut-sheet feeder set, and no forms at the platen  
Forms are loaded, and the TOP MARGIN value is made the current vertical location.

4. Buttons (when printer is offline)

**LOCK:** Switches lock mode on or off. The lock mode takes effect when the offline status changes to online. When the LOCKED lamp is on, lock mode is on. When lock mode is on, the font selected on the control panel is in effect, even if a host command sends an instruction to change it.

**FONT:** Selects a font. The font lamps light sequentially each time the FONT button is pressed. The font lamp that is on indicates which font is selected. The font setting takes effect when the offline status changes to online. If a command changes the font when lock mode is off, the font lamp indication does not change. The font, pitch, and quality for each font selection are shown here.

**Table 5-2 Font button values**

Font	Quality	Characters per inch
Courier	Letter	10
Prestige	Letter	12
Compression	CQ	17
Boldface	Letter	Proportional spacing
Timeless	Letter	Proportional spacing
Nimbus Sans	Letter	Proportional spacing
Draft	Draft	10
Draft	Draft	12
The font, quality, and pitch for the font selected in menu mode are used.		

ONLINE:	Places the system online.
MENU:	Selects Menu 1 or 2. This button is a toggle.
LF/FF:	Feeds lines or forms (same as in online mode).
TEAR OFF:	Places the system in tearoff mode (same as in online mode).
LOAD:	Loads or unloads forms (same as in online mode).
PAPER PATH:	Selects FRICTION, FRONT TRACTOR, or REAR TRACTOR.
ONLINE + LF/FF:	Feeds lines forward by 1/180 inch.
ONLINE + TEAR OFF:	Feeds lines backward by 1/180 inch.
ONLINE + LOAD:	Permanently stores the load position adjusted by fine line feeding.
LOCK + FONT:	Initializes the printer.
MENU + FONT:	Places the system in Setup mode. See Chapter 8, "Setup Modes," for more information.

## LCD type control panel

### 1. Layout

Figure 5-2 shows the LCD type control panel layout.

**Figure 5-2 Control panel layout (LCD type)**

### 2. Lamps

Control panel lamps indicate the printer status.

Table 5-3 lists the lamp functions.

**Table 5-3 Lamp functions (LCD type)**

Lamps <sup>*1</sup>	Function
POWER	Lights when power is on.
ONLINE <sup>*2</sup>	Lights when the printer is online.
ALARM (amber)	Changes to red to indicate an alarm.
FRICTION <sup>*2</sup>	Lights when cut sheets can be used. Switched by pressing the PAPER PATH button.
FRONT TRACTOR <sup>*2</sup>	Lights when the FRONT tractor can be used for continuous forms. Switched by pressing the PAPER PATH button.
REAR TRACTOR <sup>*2</sup>	Lights when the REAR tractor can be used for continuous forms. Switched by pressing the PAPER PATH button.

\*1 Lamps glow green unless otherwise indicated.

\*2 Same as the LED control panel.

### 3. LCD

Printer status, messages, or control items are displayed on the screen using alphanumeric characters. This is the LCD control panel (24 columns × 2 lines).

### 4. Buttons

**ONLINE<sup>\*1</sup>:** When the system status is online, pressing ONLINE sets the printer mode to offline after the current lines are printed. When the printer mode is offline, pressing ONLINE sets the printer mode to online.

**F1, F2, and F3:** Programmable Function buttons numbered from 1 to 3. These functions depend on the contents displayed on the LCD screen.<sup>\*2</sup>

**↑ ↓:** Switches the direction of an arrow displayed on the LCD screen.<sup>\*2</sup>

**NEXT DISPLAY:** Displays the next LCD screen.<sup>\*2</sup>

**LOAD/UNLOAD:** Loads or unloads forms. The operation depends on the situation. This is the same as the LOAD button on the LED control panel. For operation details, see 3. and 4. of "*LED Type Control Panel*" on page 5-1.

**PAPER PATH<sup>\*1</sup>:** Selects FRICTION, FRONT TRACTOR, or REAR TRACTOR.

\*1 Same as the LED control panel.

\*2 For details of the basic operation, see Appendix E, "*Using the LCD Type Control Panel*."

## Turning Printer Power On and Off

Turn power on or off as follows:

1. On

Press the power switch at the left on the front of the printer to turn the printer on (I). Depending on the switch settings, lamps will light.

---

**Note:**

Do not touch any other control panel button when turning power on or off. Otherwise, you may activate a maintenance mode for other than test printing.

---

2. Off

Press the power switch to turn the printer off (O). Lamps go out.

---

**Note:**

Wait at least 3 seconds before turning on power again after turning it off. Otherwise, a printer fault may occur.

---

## Test Printing

The printer's built-in self-test program prints the firmware version number, the names of resident emulations, and all available characters. The test prints 80 characters per line.

For the operation of the printer with the LCD control panel, see Appendix E.

Make sure paper is loaded. Check that the paper thickness lever is set to the appropriate position (see "Installing the Ribbon Cassette" on page 3-3). Then follow these steps to print a self-test page.

1. Turn off the printer.

2. Holding down the LF/FF button, turn the printer back on.

Hold LF/FF down until the printer beeps. Test printing will start then.

3. To stop printing, press the FONT or MENU button. To remove the test page, turn the platen knob clockwise.

**Note:**

Do not attempt to use the LF/FF (line feed/forms feed) button to eject paper in test mode.

4. Check that the printed page resembles the sample in Figure 5-3.

Check that printing is uniform and free of light, dark, or smudged areas. When printing quality is satisfactory, go to step 5. Otherwise, correct problems as follows:

- ① Check that the ribbon is installed correctly.
- ② Check that the paper thickness lever is set to the appropriate position.
- ③ Put a new sheet in the cut-sheet tray. Then manually turn the platen knob to advance the top edge of the paper past the top roller.
- ④ Press FONT or MENU to restart printing. If printing quality does not improve, turn off the printer and contact your dealer.

## **Demonstration Pattern Printing**

The printer prints a demonstration pattern showing some printing features, as shown in Figure 5-4. To print a demonstration pattern, follow the steps below.

For the operation of the printer with the LCD control panel, see Appendix E.

1. Load a sheet of letter- or A4-size paper.
2. Turn off the printer.
3. Holding down the FONT button, turn the printer back on. The printer will start printing the demonstration pattern.
4. For cut sheets, the demonstration stops after printing a page. If a cut-sheet feeder or continuous forms are used, the demonstration pattern is repeated. To stop or restart the demonstration during printing, press ONLINE.
5. To exit demonstration mode, turn off the printer.

---- PRINTER FUNCTION SPECIFICATION ----

Printing technology: 24 wire dot matrix, Logic seeking  
Resolution: Letter quality - 360 X 180 dots/inch  
Draft quality - 120 X 180 dots/inch

Standard command set: Fujitsu DPL24C PLUS Version 2.01  
Resident emulations: Epson ESC/P2, IBM Proprinter XL24E  
Character sets: IBM PC char.sets 1 and 2  
IBM PS/2 char.sets (Codepage 437,850,851,  
852,855,860,863,865,866)  
ISO8859-1/ECMA 94  
National character sets (USA,UK,German,  
French,Italian,Spanish,Swedish,Finnish,  
Norwegian,Danish 1 and 2,Hungarian 1 and 2,  
Slovak 1 and 2,Mazovia 1 and 2,Polish 1 and 2,  
Latin7,Latin2 1 and 2,Latin P,ISO-Latin,  
Kamenicky 1 and 2,Turkish 1 and 2,ELOT928,  
and Cyrillic)  
656 characters per font

**Sensor  
Detection**

The printer has sensors to detect the following:

- Open covers  
The printer goes offline if the top cover is open.
- Paper  
The printer stops printing when it detects a paper outage, cut-sheet search, or cut-sheet loading.
- Paper jam  
The printer stops printing when it detects a paper jam while paper is being ejected.
- Print head overheating  
The printer prints each line in three passes to protect the print head when overheating is detected.
- Print density too high  
If the print density is too high, the printer prints each line in three passes to protect the print head and power supply.
- Skewed feeding  
When the printer detects skewed feed during loading from the front table, the printer ejects a cut sheet by reverse line feeding.
- Internal lock switch (not available in some countries)  
If the top cover is opened during printing, the printer will automatically stop, and the remainder of the print data from the line being printed will be lost. Therefore, do not open the top cover during printing.

## Continuous Forms (Front)

### Clearing Paper Jams

When using front-fed continuous forms, remove jammed paper as follows (see Figures 6-1 to 6-5):

1. Turn off printer power (○).
2. Open the front cover.

**Figure 6-1** Power switch and front cover

3. Raise the cut-sheet tray.
4. Lower the green left and right jam removal levers.

**Figure 6-2** Cut-sheet tray and jam removal lever

5. Turn the tractor lock levers in the direction indicated by the arrows in Figure 6-3 to unlock them. Then open the paper holders.
6. Cut the forms just in front of the tractors.

**Figure 6-3 Lock levers and tractors**

7. Remove jammed continuous forms from the tractors as follows:
  - ① Remove paper from the paper guide, at the back of the printer.
  - ② Remove other paper from the front of the printer.

**Figure 6-4 Removing continuous forms**

- ③ Remove jammed paper in the printing section as follows:
  - a. Open the top cover.
  - b. Slide the paper thickness lever down to D.
  - c. Move the print head away from the paper.
  - d. Remove the paper.

Clearing Paper Jams

**Figure 6-5** Removing jammed paper from the printing section

8. Lift the green left and right jam removal levers and return them to their original locations.
9. Lower the cut-sheet tray.
10. Reload forms.

**Note:**

To prevent paper jams when using continuous forms, align the left and right holes with the tractor feed holes and ensure that the forms have no slack.

## **Continuous Forms (Rear)**

Refer to the *Rear-Feed Tractor User's Manual* for information on the rear-feed tractor option.

## **Cut Sheets**

Remove jammed cut sheets as follows (see Figures 6-6 to 6-9):

1. Turn off printer power (○).
2. Open the front cover.

**Figure 6-6 Power switch and front cover**

3. Raise the cut-sheet tray.
4. Lower the green left and right jam removal levers.

**Figure 6-7 Cut-sheet tray and jam removal lever**

5. Lower the cut-sheet tray.

**Figure 6-8** Cut-sheet tray

Clearing Paper  
Jams

6. Remove the jammed cut sheet as follows:
  - ① Remove paper in the paper guide from the back of the printer.
  - ② Remove paper other than paper in the paper guide from the front of the printer.

**Figure 6-9** Removing a jammed cut sheet

- ③ Remove paper in the printing section as explained in ③ of step 7 in "Continuous Forms (Front)" on page 6-3.

**Note:**

When loading forms after clearing a jam, be sure to insert cut sheets with the left edge aligned with the paper guide.

---

## Paper Specifications

This chapter describes paper that the printer can use.

Any other paper should be tested carefully before use.

### Continuous Forms

#### 1. Size

Figure 7-1 shows the size range for continuous forms.

Paper  
Specifications

Measurement	Dimensions in mm (in)
Paper width Y	101.6 to 419 (4 to 16.5)
Length between folds T	101.6 (4) or more

**Figure 7-1** Size range for continuous forms

2. Number of parts

The printer can handle multipart paper. Table 7-1 lists allowable combinations for the total number of parts, including the original, and the ream weight.

**Table 7-1 Number of parts and ream weight for continuous forms**

Type	Number of parts	Ream weight in g/m <sup>2</sup>
Single part	1	46, 52, 64, 81
Pressure sensitive * <sup>1</sup>	2	39, 50, 64, (81)
	3	39, 50, (64, 81)
	4	39, (50, 64, 81)
	5	39, (50, 64)
	[6]	39, (50, 64)
	[7]	39, (50, 64)
	[8]	39, (50, 64)
Carbon-backed multipart * <sup>1</sup>	2	39, 52, 64, (81)
	3	39, 52, (64, 81)
	4	39, (52, 64, 81)
	5	39, (52, 64)
	[6]	39, (52, 64)
	[7]	39, (52, 64)
	[8]	39, (52, 64)
Multipart with carbons * <sup>2</sup>	2	34, 46, 52, (64, 81)
	3	34, 46, (52, 64)
	[4]	34, 46, (52, 64)

\*1 Ream weights for pressure-sensitive and carbon-backed multipart forms may differ slightly according to the manufacturer. Select forms of the weight closest to those in Table. 7-1.

\*2 The maximum number of parts for multipart forms with carbons counts each carbon as one part; that is, the maximum is four.

**Notes:**

1. For specifications for continuous forms loaded from the back of the printer, refer to the *Rear-Feed Tractor User's Manual*.
2. The printer can use only the bottom copy layer of paper with its weight in parentheses ( ).
3. Characteristics of paper with the number of parts in brackets [ ]

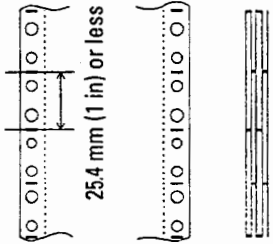

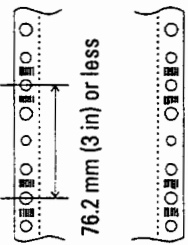

may differ slightly with the manufacturer and should be tested carefully before use.

4. Paper used for continuous forms differs depending on whether it is loaded from the front or from the back of the printer. The paper specifications in Table 5-1 are for forms loaded from the front.
5. The total thickness of multipart paper must not exceed 0.65 mm (0.025 in).

### 3. Binding

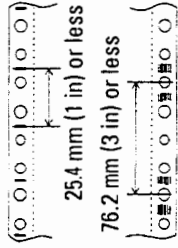

Select a binding type from Table 7-2.

**Table 7-2 Binding for continuous forms with two to six parts**

Binding	Remarks
<p>Double-sided glued multipart forms (zigzag spot gluing)</p> 	<p>Recommended because:</p> <ul style="list-style-type: none"> <li>• Forms remain flexible.</li> <li>• Parts do not separate or become misaligned easily.</li> </ul>
<p>Double-sided paper staples</p> 	<p>The more parts, the easier the parts separate or become misaligned.</p>

Paper Specifications

Table 7-2 Binding for continuous forms with two to six parts

Binding	Remarks
<p>Single-sided zigzag spot gluing and paper staples from back</p> 	<p>Combination of the other two types of binding</p>

**Note:**

To avoid paper feed problems, do not bind as shown in Figure 7-2.

Figure 7-2 Examples of incorrect binding

Check that the height of unfolded pasted forms at perforations is 2 mm (0.08 in) or less (Figure 7-3).

Figure 7-3 Height at perforation

4. Binding holes

The shaded area shown in Figure 7-4 causes certain restrictions on binding holes dimensions.

Any binding hole completely in the shaded area must be 7 mm (0.28 in) or less in diameter.

Figure 7-4 Binding holes

5. Perforations

The perforations in continuous forms must meet the following conditions:

The ratio of cut to uncut areas for single-part continuous forms must be 3:1 (Figure 7-5).

The uncut dimension at C on each end of horizontal perforations shown in Figure 7-5 must be 1 mm or more.

Figure 7-5 Perforations (1)

Paper Specifications

When a cross-point cut occurs at the juncture of vertical and horizontal perforations, printing is inhibited in the shaded area shown in Figure 7-6. Printing is not allowed in this area to prevent damage to forms and also to prevent printer faults.

Figure 7-6 Perforations (2)

**Note:**

This restriction also applies when the print head moves without printing.

6. Print area

Figure 7-7 shows the print area on continuous forms.

Area	Size in mm (in)	
A	25.4 (1.0)	*1
B	5.08 to 30 (0.2 to 1.18)	*2
C	5.08 (0.2) or more	*3
D	152 (6.0)	*4
E	Appropriately 29 (1.1)	*5
F	3.5 (0.14)	*6

Paper Specifications

- \*1 Characters printed in this area may not be neat. A line spacing of 4.2 mm (1/6 in) or more prevents characters on adjacent lines from overlapping.
- \*2 Depending on the paper width, this size varies as follows:  
101.6 to 119.4 mm (4 to 4.7 in) wide: 5.08 to 9 mm (0.2 to 0.35 in)  
388.6 to 419 mm (15.3 to 16.5 in) wide: 15 to 30 mm (0.6 to 1.18 in)
- \*3 This size varies with the paper width and number of print columns, but must be at least 5.08 mm (1/5 inch).
- \*4 This area feeds off the tractors and prevents reverse line feed.
- \*5 This value indicates the paper-end detection point.
- \*6 Do not move the printing unit horizontally in this area as paper may be smeared by the ink ribbon or the printing unit may be caught at bulges.
- \*7 Printing override of up to 12.7 mm (1/2 in) is possible, but may cause incorrect print line sequencing.

Figure 7-7 Print area for continuous forms

**Cut Sheets**

For cut sheets, use high-quality paper with a light reflection factor of 60 percent or more. Ordinary high-quality white paper has a light reflection factor of approximately 70 percent. The darker or thinner the paper, the lower the reflection factor.

1. Size

Width: 90 to 420 mm (3.5 in to A3 horizontal)

Length: 90 to 420 mm (3.5 in to A3 horizontal)

2. Number of parts

The printer can handle multipart paper. Table 7-3 lists allowable combinations for the total number of parts, including the original, and the ream weight.

**Table 7-3 Number of parts and ream weight for cut sheets**

Type	Number of parts	Ream weighting g/cm <sup>2</sup>	Front	Rear <sup>*1</sup>
Single part	1	<35>, 46, 52, 64, 81		○
		35, 46, 52, 64, 81, 104, 127	○	
Pressure sensitive <sup>*2</sup>	2	39, 50, 64, (81)	○	○
	3	39, 50, (64, 81)	○	○
	4	39, (50, 64, 81)	○	○
	5	39, (50, 64)	○	○
	[6]	39, (50, 64)	○	○
	[7]	39, (50, 64)	○	
	[8]	39, (50, 64)	○	
Carbon-backed multi-part <sup>*3</sup>	2	39, 52, 64, (81)	○	○
	3	39, 52, (64, 81)	○	○
	4	39, (52, 64, 81)	○	○
	5	39, (52, 64)	○	○
	[6]	39, (52, 64)	○	○
	[7]	39, (52, 64)	○	
	[8]	39, (52, 64)	○	

\*1 For DL6600 only.

\*2 Ream weights for pressure-sensitive and carbon-backed multipart forms may differ slightly according to the manufacturer. Select forms of the closest weight to those in the table.

\*3 Do not use carbon paper with cut sheets.

**Notes:**

1. Paper with its weight in angle brackets < > must be at least 254 mm (10 in) wide.
2. For multipart forms the ream weight of the bottom sheet being used must be one of the values in parentheses ( ).
3. Characteristics of paper with the number of parts in brackets [ ] may differ slightly according to the manufacturer and should be tested carefully before use.
4. The total thickness of multipart paper must not exceed 0.65 mm (0.025 in).

**3. Binding**

Paste sheets at the top (Figure 7-8).

Paper  
Specifications

**Note:**

Pasted portions must be flexible and free of curl.

**Figure 7-8** Cut-sheet binding

4. Print area

Figure 7-9 shows the print area on cut sheets.

Area	Size in mm (in)
A	25.4 (1.0)
B	22.0 (0.86)
C* <sup>1</sup>	5.1 (0.2) to 38 (1.5) or more
D	5.1 (0.2) or more

\*1 For wide paper, this specification is as follows:  
 406.4 mm (16 in) wide: 22.5 to 38.5 mm (0.9 to 1.5 in)  
 419 mm (16.5 in) wide: 36 to 38.5 mm (1.4 to 1.5 in)

**Figure 7-9 Print area for cut sheets**

**Labels**

Only labels on the front of continuous forms backing sheets can be printed.

1. Size

Paper size specifications are the same as for general continuous forms.

2. Paper thickness

The label and backing sheet together must be 0.2 mm (1/27 in) or less.

**Notes:**

1. The thickness of the backing sheet must be 0.1 mm (1/254 in) or less.
2. The thickness of the label must be 0.1 mm (1/254 in) or less.

3. Label adhesion

Labels must satisfy the conditions in Figure 7-10 and not peel off easily.

Winding drum diameter	27 mm (1.06 in)
Winding angle	180°
Winding time	24 hours
Ambient temperature	40°C
Ambient humidity	30% RH

Paper Specifications

**Figure 7-10 Label adhesion**

4. Print area

Figure 7-11 shows the print areas on labels.

Area	Size in mm (in)
A	2.54 (0.1) or more
B	6.35 (0.25) or more
C	2.54 (0.1) or more
D	25.4 (1) *1

\*1 Lines may not be fed neatly in the print area of D. A line spacing of 1/6 inch or more prevents characters on adjacent lines from overlapping.

**Figure 7-11 Print area for labels**

5. Formats

Use the formats shown in Figure 7-12 to prevent peeled labels from causing feed failures, print head damage, and other serious problems.

Example 1:

Leave the four corners and sides uncut between cut portions and do not remove nonlabel areas\*1.

This procedure completely prevents label peeling.

Example 2:

If nonlabel areas<sup>\*1</sup> must be removed, round label corners.

Paper Specifications

\*1 Areas other than labels that adhere to the backing sheet.

Figure 7-12 Recommended label formats

6. Restriction on APTC option

The printer performs automatic paper thickness detection on the printing side. For forms with backing sheets removed, the thickness differs between the label and backing sheet. Measure the thickness at a label as shown in Figure 7-13.

**Note:**

Ensure that there are printed characters in the shaded area.

**Figure 7-13** Label arrangement

## Precautions

## 1. Preprinting

When printing using a color with a reflection factor of 60 percent or less, such as black, do not print in the shaded area shown in Figure 7-14.

Paper Specifications

**Note:**

The printer uses an autosensor to detect loaded paper in the shaded area. If the area is preprinted in black, the sensor may fail to detect the paper because of decreased light reflection.

**Figure 7-14 Preprinting-inhibited area (1)**

- Perform preprinting as follows:

- ① Do not print horizontal lines thicker than 8 mm (0.3 in) (Figure 7-15).

**Figure 7-15 Preprinting-inhibited area (2)**

- ② When consecutively printing lines that satisfy the specification in ①, leave an interval of 8 mm (0.3 in) or greater between lines.

**Note:**

If the line thickness is 0.5 mm (0.02 in) or less, the interval can be 4 mm (0.16 in) or more.

---

**Figure 7-16 Preprinting-inhibited area (3)**

- ③ When printing near a paper edge, leave a margin of 8 mm (0.3 in) or greater (Figure 7-17).

**Note:**

If the line thickness is 0.5 mm (0.02 in) or less, the interval can be 4 mm (0.16 in) or more.

---

**Figure 7-17 Preprinting-inhibited area (4)**

- ④ When printing vertical lines in the shaded area in Figure 7-14, make lines 0.5 mm (0.02 in) thick or less and do not print more than one line.

Before printing characters in the shaded area in Figure 7-14, use the sample to check that the characters can be printed.

---

2. Binding hole

The shaded area in Figure 7-14 also places restrictions on binding holes punched in that area. If punching is necessary, make the holes 7 mm (0.28 in) or less in diameter.

3. Smearing caused by paper feed roller

If the percentage of printing in the shaded areas in Figure 7-18 is high, the paper feed roller may smear paper at loading or ejection. Design the format to make areas as far away from the printed area as possible or print a color or pattern on the paper to make smearing unnoticeable.

Smear areas in Figure 7-18 assume that the left margin is 25.4 mm (1 in). If the left margin is changed, smear areas move proportionally.

Paper Specifications

Figure 7-18 Areas smeared by paper feed roller

4. Miscellaneous

When using special paper that does not conform to specifications, prepare samples for full trials before using the paper.

Store and handle paper with care to prevent deformation or damage. Do not store paper where humidity is high.

## Overview

# Setup Mode

The printer provides two modes: normal mode, for everyday printer operations, and setup mode, for selecting printer options and helping diagnose printer problems.

Setup is performed offline using the printer control panel, an approach called offline setup, or remotely using a processor or software, an approach called setup program online setup. This chapter focuses on offline setup. The section “*Performing Online Setup*” on page 8-47 applies to all emulations. For more information, refer to the programmer’s manuals for the emulation you are using.

Optional printer settings include emulation, fonts, spacing, page length and width, serial interface selections, and top-of-form setting. Saving settings in the printer’s permanent memory makes them default settings. Default settings are activated whenever the printer is turned on. If DPL24C PLUS is saved as the default emulation, for example, DPL24C PLUS is activated when the printer is next turned on.

Printer diagnostic functions include SELF-TST, HEX-DUMP, and V-ALMNT, used in troubleshooting. HEX-DUMP is mainly used by programmers.

The printer with the LED control panel operates as follows. First, the contents of “Function,” “Item,” and “Option” in the offline setup function are printed. Press the FONT, MENU, or LOCK button to move the yellow arrow marked on the printer head beneath the required function.

The printer with the LCD control panel operates as follows. First, the contents of “Function,” “Item,” and “Option” in the offline setup function are displayed on the LCD screen. Press F1, F2, or F3 to select the required function. On the LCD display, “Option” can be easily set or “Function” can be easily executed. For the basic operation of the offline setup function, see Appendix E.

## **Chapter Organization**

If you are using setup mode for the first time, you should read “*Activating Setup Mode*” on page 8-2 and “*Using Setup Mode*” on page 8-4 to learn how setup mode works. Once you understand the basics, read the following sections to learn how to select printer options compatible with your processor hardware and software.

To restore printer default values set at shipment, see “*Resetting Default Values*” on page 8-36.

For information on how to use SELF-TST, HEX-DUMP, and V-ALMNT, see “*Using Diagnostic Functions*” on page 8-37.

Experienced users can turn to the flowchart at the end of this chapter, which lists the printer setup functions and options for quick reference.

## **Activating Setup Mode**

Before entering setup mode, load continuous forms paper. For information, see “*Continuous Forms (Front)*” on page 4-1. You will need approximately eight sheets of paper to print all setup selections.

Enter setup mode as follows:

1. Check that forms are loaded.
2. Press ONLINE to place the printer offline.
3. Press FONT and MENU together until the printer beeps.

If a beep does not sound, you are not in setup mode. Place the printer offline and try again.

Upon entering offline setup mode, the printer prints the information shown in Figure 8-1.

```

*** OFFLINE SETUP MODE ***

- Arrow on head indicates the option to be selected.
- The selected option is underlined.
- "SAVE&END" function must be selected to exit setup mode.
- Following list shows how buttons function in setup mode:

BUTTON| ACTION on <<FUNCTION>> menu| ACTION on <ITEM> menu
-----+-----+-----
ONLINE|Reprint <<FUNCTION>> menu |Select option & return to <<FUNCTION>> menu
FONT |Select function |Select option & print next item
MENU |Select function |Select option & print previous item
LOCK |Move head to next function |Move head to next option

<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-PUMP
^ALMNT
    
```

Setup Mode

**Figure 8-1 Initial setup mode printout**

The initial printout contains a header, help menu, and <<FUNCTION>> menu. The header shows that the printer is offline and in setup mode. The help menu summarizes setup mode operations. The <<FUNCTION>> menu lists all functions available in setup mode. Note that the yellow arrow on the print head is initially below the SAVE&END function.

Another way to enter setup mode is to turn off the printer and then turn it on again while pressing the FONT and MENU buttons. Continue pressing the buttons until the printer beeps.

## Using Setup Mode

Entering setup mode prints the <<FUNCTION>> menu.

```
<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-DUMP
V-ALMNT
```

Table 8-1 summarizes the setup mode functions.

**Table 8-1 Setup mode functions**

Function	Purpose
SAVE&END	Exits setup mode and saves changes made in setup mode.
MENU1 and MENU2	Assigns print features to MENU1 and MENU2 on the control panel.
HARDWRE	Changes hardware options.
ADJUST	Changes print adjustment options.
CONFIG	Changes configuration options.
GAP-ADJ	Sets the head gap, and is displayed when the printer is equipped with the APTC function.
DEFAULT	Resets MENU1 and MENU2 default values set at shipment.
LIST	Prints all currently selected options.
SELF-TST	Run the self-test.
HEX-DUMP	Prints hexadecimal data dumps.
V-ALMNT	Checks and corrects vertical printing alignment.

To select a function from the <<FUNCTION>> menu, do the following:

1. Repeatedly press LOCK to position the yellow arrow on the print head beneath the required function.
2. Press FONT or MENU to select a function. If the function has items and options, the printer prints the first item and its options.

MENU1, MENU2, HARDWRE, ADJUST, CONFIG, and GAP-ADJ contain items with selectable options.

The first three MENU1 items shown in angle brackets < > and options, for example, are as follows:

```

<EMULATE>  DPL24C+  XL24E   ESC/P2
<FONT>
  COUR 10  PRSTG12  COMPRSD  BOLDfce  PICA10  CORRESP  OCR-B  COUR-N  COUR-B  COUR-I
  N.SAN-N  N.SAN-B  N.SAN-I  TIMLS-N  TIMLS-B  TIMLS-I  DOWNLD0  DOWNLD1
<QUALITY>  LETTER  REPORT  DRAFT
  
```

To select an option from an item menu, do the following:

1. Repeatedly press LOCK to position the yellow arrow on the print head beneath the required option.
2. Press FONT to select the option. The printer prints the next function and its options.
3. After selecting options, press ONLINE to reprint the <<FUNCTION>> menu.

Underlined options are current default settings—that is, the settings saved in the printer's permanent memory. In the preceding example, the default options are Fujitsu DPL24C PLUS emulation, Courier 10 font, and letter-quality printing.

Figure 8-2 summarizes option selection and button use for functions that do not have options.

The following example illustrates the use of setup mode. The example shows how to change the font and spacing in MENU2 to Prestige Elite 12 and 12 cpi.

1. Load continuous forms.
2. Enter setup mode.

Press FONT and MENU together until the printer beeps.

3. Select the MENU2 function.

Wait for the printer to stop printing and press LOCK twice to position the yellow arrow on the print head beneath MENU2. Press FONT or MENU to select MENU2 and print <EMULATE> and its options.

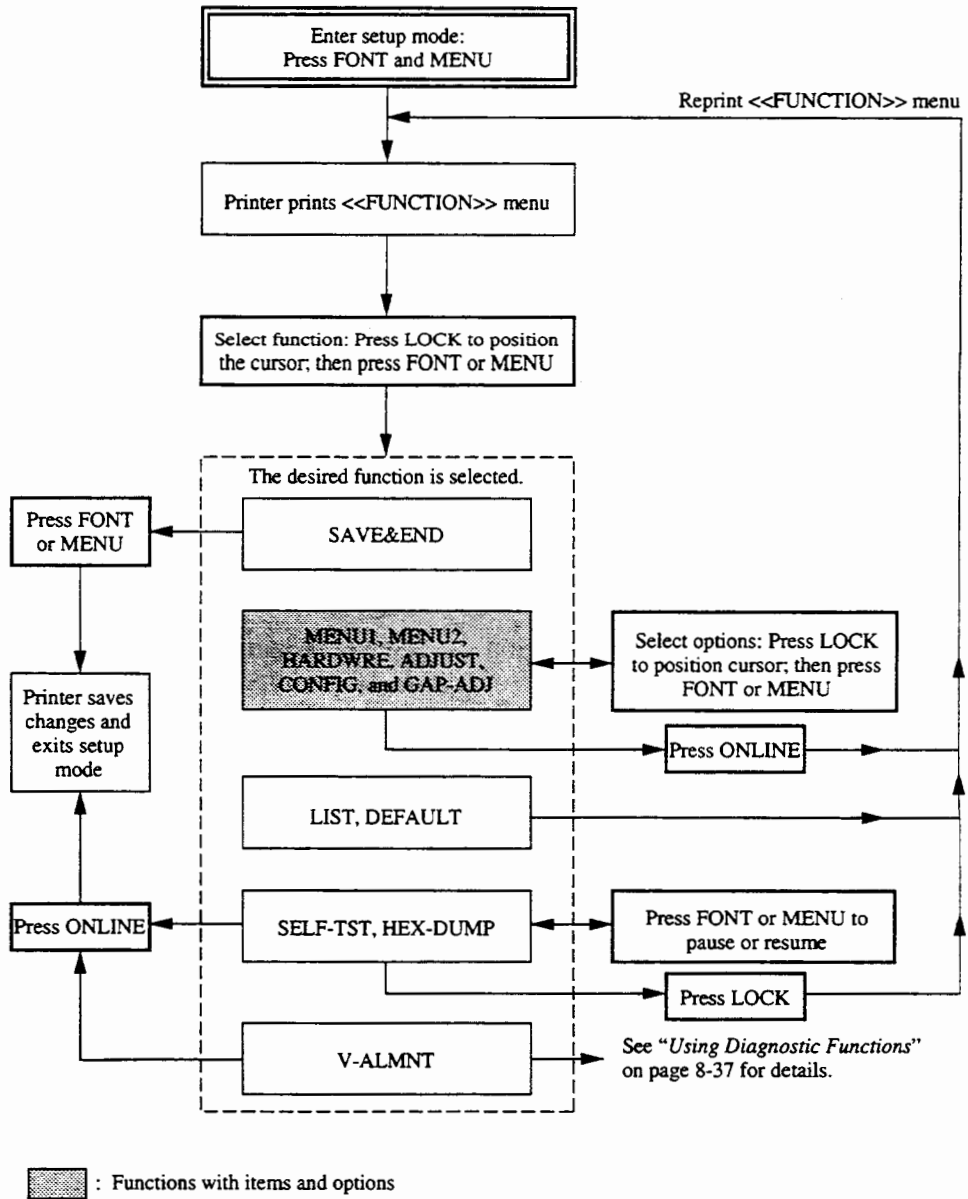

Figure 8-2 Setup mode summary

---

4. Select the current emulation.

To leave the emulation unchanged, press FONT to select the current emulation and print <FONT> and its options.

5. Change the font to Prestige Elite 12.

Press LOCK once to position the yellow arrow on the print head beneath PRSTG12. Press FONT to select PRSTG12 and print <QUALITY> and its options.

6. Select the current print quality.

To leave print quality unchanged, press FONT to select the current print quality and print <PITCH>.

7. Change spacing to 12 cpi and exit MENU2.

Press LOCK once to position the yellow arrow beneath 12 CPI. To leave MENU1 unchanged, press ONLINE to select 12 CPI and exit MENU2. The <<FUNCTION>> menu is then reprinted.

8. Exit setup mode, saving the new font and spacing.

The cursor is beneath SAVE&END, so press FONT or MENU to select SAVE&END. The printer save Prestige Elite 12 and 12 cpi as the new default settings in MENU2. It then exits setup mode and goes back online. These settings remain in effect until changed.

Setup Mode

---

**Notes:**

1. Load continuous forms before entering setup mode. LF/FF and LOAD cannot be used to feed or load paper in setup mode.
2. When setup mode is entered, short help menus are printed at the top of the page. Help menus are also printed when SELF-TST, HEX-DUMP, or V-ALMNT is selected. Use help menus for quick reference in setup mode.
3. Functions and options can be printed only one at a time. To move forward (print the next function) in the item list, press FONT. To move backward (print the previous function), press MENU.
4. While in the <<FUNCTION>> menu or selecting a function that contains items and selectable options, press ONLINE to reprint the <<FUNCTION>> menu.
5. Underlining beneath the first two letters of an option indicates the

current default setting. For example, 12 CPI indicates that 12 characters per inch is the default value. To change the default settings, select and save a new setting.

6. While in setup mode, use LIST to print a list of currently selected options. For details, see “*Printing a List of Options*” below.
  7. To exit setup mode and permanently save changes, select either SAVE & END or SELF-TST. For details, see “*Exiting and Saving*” on page 8-35. To exit setup mode without saving changes, turn the printer off. Previous default settings are activated when the printer is turned on again.
- 

## **Printing a List of Options**

LIST prints a list of all currently selected options. This list is useful for checking settings when entering or exiting setup mode. To print options, load continuous forms. Then do the following:

1. Enter setup mode

To enter setup mode printer must be offline.

Press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-DUMP
V-ALMNT
```

2. Select LIST.

Repeatedly press LOCK to position the yellow arrow on the print head beneath LIST. Next, press FONT or MENU to select LIST. The printer starts to print a list of current options. Figure 8-3 shows the default values set at shipment.

**Note:**

To remove the printout, turn the platen knob until paper can be torn off at the perforation. The TEAR OFF button cannot be used in setup mode.

---

3. Either select another function or exit setup mode, saving any changes you made.

When exiting setup mode and saving changes, check that the yellow arrow on the print head is positioned beneath SAVE & END. Then press FONT or MENU.

```

**Setting Required Options**

The sections “*Changing MENU1 and MENU2 Options*” on page 8-11 to “*Changing Configuration Options*” on page 8-32 list the default settings for options by function and tell how to change the settings.

Menu 1 settings (MENU1)

Menu 2 settings (MENU2)

Hardware settings (HARDWRE)

Print adjustment settings (ADJUST)

Configuration settings (CONFIG)

Head gap adjustment (GAP-ADJ)

Most selectable options simply change print features such as the type face and page format. Some options, however, must be selected correctly for the printer to work properly with hardware and software. Table 8-2 lists these options.

**Table 8-2 Required options**

<b>Function</b>	<b>Item</b>	<b>Options</b>
MENU1	EMULATE	The emulation selected for the printer and software must match. The emulation selected at printer setup (see Chapter 2, “ <i>Setting Up the Printer</i> ”) need not be changed unless you want to switch to a different emulation. The emulation assigned to MENU1 is the default setting when the printer is turned on. See “ <i>Changing MENU1 and MENU2 Options</i> ” on page 8-11.
MENU2	None	If MENU2 is used, the selected emulation must match that of the software. See “ <i>Changing MENU1 and MENU2 Options</i> ” on page 8-11.
HARDWRE	FORMAT BAUD-RT PROTOCL DSR DUPLEX	For a serial interface model, serial interface options selected for the printer must match those of the software or operating system. Otherwise, the printer will not print or will print incorrectly. See “ <i>Changing Hardware Options</i> ” on page 8-24.

Table 8-2 Required options (Continued)

Function	Item	Options
ADJUST	None	If your software does not specify the top margin of the page, use the printer's default top-of-form setting: 25.4 mm (1 in) from the top of the paper. If the software does specify the top margin, change the default setting to 4.2 mm (1/6 in). See "Changing Print Adjustment Options" on page 8-28.

### Changing MENU1 and MENU2 Options

MENU1 and MENU2 set print options for MENU1 and MENU2 on the control panel. In normal (nonsetup) mode, these menus are easily switched.

Table 8-3 lists MENU1 and MENU2 items and options in the order they are printed. For some emulations, some items are not defined and some options differ.

MENU1 is active when the printer is first turned on.

The printer emulation must match that of the software. Otherwise, the printer will not work correctly. If you regularly use two different emulations, assign the most frequently used to MENU1 and the other to MENU2. All settings available for MENU1 and MENU2 are optional. Some items and options differ with the emulation.

To determine which features specific software supports, refer to the software documentation.

The procedure for changing the MENU1 and MENU2 options follows Table 8-3.

Setup Mode

Table 8-3 MENU1 and MENU2 options

MENU 1 or MENU2 item	Options	Description
<EMULATE>	<p><u>DPL24C+</u> X24E ESC/P2</p>	<p>Select the same emulation as that of the software.</p> <p>Fujitsu DL-series printers (DPL24C PLUS command set) IBM Proprinter XL24E printers Epson printers using the ESC/P2 command set</p> <p>Note: Changing the emulation resets all MENU1 or MENU2 options to the default values set at shipment.</p>

Table 8-3 MENU1 and MENU2 options (Continued)

MENU 1 or MENU2 item	Options	Description
<QUALITY>	<u>LETTER</u>	Select the print quality that meets most needs.  Letter quality. Highest resolution, slowest print speed, invalid for compressed fonts.
	REPORT	Report quality. Lower resolution than letter quality, but prints at twice the speed. For double speed regardless of font, use the correspondence font because its quality is higher than report.
	DRAFT	Regular draft quality. Lower resolution than report quality, but prints at three times letter speed.
<PITCH>	## CPI	2.5, 3, 5, 6, <u>10</u> , 12, 15, 17, 18, or 20 characters per horizontal inch (cpi)
	PROP SP	Proportional spacing (1/12 inch for a space)
<LINE SP>	## LPI	1, 2, 3, 4, 5, <u>6</u> , 7, or 8 lines per vertical inch (lpi)  6 lpi:     3 lpi (double spacing): ABCD    ABCD ABCD ABCD    ABCD ABCD ABCD    ABCD ABCD

Setup Mode

Table 8-3 MENU1 and MENU2 options (Continued)

MENU 1 or MENU2 item	Options	Description
<CHAR-W>		If necessary, also change the spacing when 2 TIMES or 4 TIMES is selected.
	<u>NORMAL</u>	Standard character width: ABCD
	2 TIMES	Double character width: <b>ABCD</b>
	4 TIMES* <sup>1</sup>	Quadruple character width: <b>ABCD</b>
<CHAR-H>	<u>NORMAL</u>	If necessary, also change the line spacing when 2 TIMES or 4 TIMES is selected. Standard character height: ABCD abcd
	2 TIMES	Double character height: ABCD abcd
	4 TIMES* <sup>1</sup>	Quadruple character height: ABCD abcd

Table 8-3 MENU1 and MENU2 options (Continued)

MENU 1 or MENU2 item	Options	Description
<ATTRIB>	<u>NONE</u>	Select an attribute to add emphasis. Only one attribute can be selected at a time.  Standard characters (no attributes)
	ITALICS	<i>Italic printing</i>
	CONDNSD *1	Condensed printing
	SHADOW	Double printing with a slight offset
	BOLD	Double printing at the same location
<PAGE LG>	## IN	Specifies the page length in inches.  DPL24C PLUS and IBM XL24E emulations: 3.0, 3.5, 4.0, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, <u>11.0</u> (letter size), 11.6 (A4 size), 12.0, 14.0, or 18.0 inches  Epson ESC/P2 emulation: 4.0, 4.5, 5.0, ..., <u>11.0</u> , 11.5, ..., 22.0 inches
<LFT-END>	## COLM	Specifies the print start column for modifying the left margin. Printing starts at this column plus the software-specified left margin.  Column 1, 2, 3, ..., 41
		

Setup Mode

Table 8-3 MENU1 and MENU2 options (Continued)

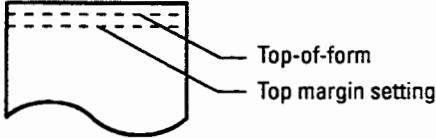

MENU 1 or MENU2 item	Options	Description
<TOP-MRG>	## LINE1	<p>Specifies the number of space lines for the top margin. The resultant blank space is the &lt;TOP-MRG&gt; setting minus one line.</p> <p>The total size of the top margin is the preceding value plus these two settings: top-of-form (default = 1 inch) plus software-specified top margin. If using software to specify the top margin, use the default setting (one line) for &lt;TOP-MRG&gt;.</p> <p>1, 2, 3,4, 5, 6, 7, 8, 9, or 10 lines</p>  <p>The diagram shows a rectangular box representing a page. A dashed horizontal line at the top is labeled 'Top-of-form'. Below it, a solid horizontal line is labeled 'Top margin setting'. The area between these two lines represents the top margin. The bottom of the box is wavy, indicating the page's edge.</p>

Table 8-3 MENU1 and MENU2 options (Continued)

MENU 1 or MENU2 item	Options	Description
<CHR-SET>	SET 1 <u>SET 2</u>	IBM character set 1 IBM character set 2  If a downloaded (soft) font is used, the character set for that font overrides the <CHR-SET> setting.
	*3 ITALIC GRAPHIC	Italic characters possible Graphics characters (ruled lines) possible
<AGM>*4	<u>OFF</u> ON	Specifies that alternate graphics mode (AGM) is off. The unit of line spacing is 1/72 or 1/216 of an inch. Specifies that alternate graphics mode (AGM) is on. The unit of line spacing is 1/60 or 1/180 of an inch.
<PRF-SKP>		For continuous forms, specifies whether an inch is skipped over the perforation. If not using software to specify a bottom margin, select SKIP when using thick multipart forms.
	SKIP <u>NO-SKIP</u>	One inch is skipped over the perforation. The perforation is not skipped. Printing continues in the bottom margin of the page.
<WIDTH>	<u>13.6 IN</u> 11.0 IN 8.0 IN	13.6-inch (0.54-mm) page width 11-inch (0.43-mm) page width 8-inch (0.31-mm) page width
<ZEROFNT>*2		Specifies whether the number zero is printed with a slash. The slash is useful for distinguishing the capital letter "O" from the number "0." This setting is invalid for some software fonts.
	<u>NO-SLSH</u> SLASH	0 Ø

Setup Mode

Table 8-3 MENU1 and MENU2 options (Continued)

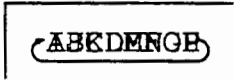

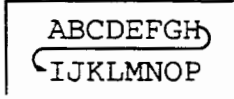

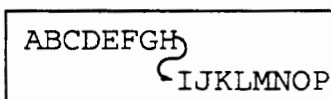

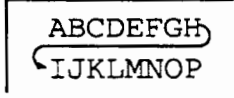

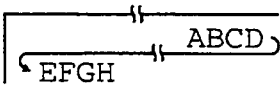

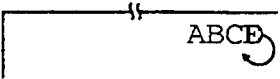

MENU 1 or MENU2 item	Options	Description
<DC3-CDE>*5	ENABLE	Enables DC1 and DC3 codes. Any data received between DC3 and the next DC1 is ignored.
	DISABLE	Disables DC1 and DC3 codes. These codes are then ignored.
<CR-CODE>	<u>CR ONLY</u>	No line feed is added to a carriage return 
	CR & LF	A line feed is added to each carriage return. 
<LF-CODE>*2	LF ONLY	No carriage return is added to a line feed. 
	LF & CR	A carriage return is added to each line feed. 

Table 8-3 MENU1 and MENU2 options (Continued)

MENU 1 or MENU2 item	Options	Description
<RGHTEND>	WRAP	End-of-line wrap. Causes a carriage return plus a line feed. 
	OVR-PRT	Characters are overprinted at the end of a line. 
<==END==>		Indicates the end of MENU1 items. Press FONT to print the first item, <EMULATE>. Press MENU to print the previous item, <RGHTEND>. Press ONLINE to reprint the <<FUNCTION>> menu.

Setup Mode

- \*1 Unavailable for the IBM XL24E emulation
- \*2 Unavailable for the Epson ESC/P2 emulation
- \*3 Available only for the Epson ESC/P2 emulation
- \*4 Available only for the IBM XL24E emulation
- \*5 Available only for the DPL24C+ Emulation
- \*6 Underlined options are the factory default settings.

To change MENU1 or MENU2 options, check that continuous forms are loaded. Then do the following:

1. Enter setup mode.

Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing. The <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-DUMP
V-ALMNT
```

2. Select MENU1 or MENU2.

Repeatedly press LOCK to position the yellow arrow on the print head beneath either MENU1 or MENU2. Press FONT or MENU to select the function and print the <EMULATE> options.

```
<EMULATE>  DPL24C+  XL24E  ESC/P2
```

3. Select an emulation.

Repeatedly press LOCK to position the cursor beneath the emulation required. Then do one of the following:

- Press FONT to select the emulation and print the next MENU1 or MENU2 item. In Table 8-3, this item is <FONT>.
- Press MENU to select the emulation and print <==END==>. Press MENU again to print the last MENU1 or MENU2 item. In Table 8-3, this item is <RGHTEND>. Using MENU is convenient when options to be changed are near the end of the list.

---

**Note:**

Whenever a new emulation is selected, all MENU1 or MENU2 options are reset to the default values for that emulation.

---

4. Change other MENU1 or MENU2 options as required.

Press LOCK to move the yellow arrow on the print head to the option. Press FONT to select the option and print the next item

listed in Table 8-3. Press MENU to select the option and print the previous item.

5. Exit MENU1 or MENU2.

Press ONLINE to exit the selected function and reprint the <<FUNCTION>> menu.

6. Either select another function or exit setup mode, saving changes.

To exit setup mode and save changes, check that the yellow arrow on the print head is positioned beneath SAVE&END. Then press FONT or MENU.

---

**Note:**

To reset MENU1 and MENU2 to their default values, select DEFAULT. See the section called “Resetting Default Values” on page 8-37. DEFAULT does not reset options handled by HARDWARE, ADJUST, or CONFIG.

---

Setup Mode

## Changing Hardware Options

HARDWRE defines printer hardware conditions. If you are using the optional RS-232C serial interface, serial interface options must be set correctly for the printer to function with system hardware.

Table 8-4 lists HARDWRE items and options in the order they are printed. The procedure for changing hardware options follows Table 8-4.

**Table 8-4 HARDWRE options**

HARDWRE item	Options	Description
<PPR-OUT>	<p><u>CN</u>ONLY</p> <p>DETECT</p> <p>IGNORE</p>	<p>Specifies how the printer responds to a paper outage.</p> <p>The printer detects paper outage only for continuous forms. Printing stops, and the PAPER OUT indicator (or ALARM indicator) glows amber.</p> <p>The printer detects paper outage for both continuous forms and cut sheets. Printing stops, and the PAPER OUT indicator (or ALARM indicator) glows amber.</p> <p>The printer ignores paper outage for both continuous forms and cutsheets. Printing continues until no more data remains. No PAPER OUT (or ALARM) warning occurs.</p> <p>Note: For cut-sheet feeders, printing stops, and the PAPER OUT (or ALARM indicator) indicator glows amber, regardless of the &lt;PPR-OUT&gt; setting.</p>
<PRT-DIR>	<p><u>BI</u>-DIR</p> <p>UNI-DIR</p>	<p>The printer performs bidirectional printing in both directions while seeking the next print direction, this option is used for a shorter print time.</p> <p>The printer performs unidirectional printing. This feature is useful for printing vertical lines in tables even if vertical alignment is not adjusted. Printing is slower than bidirectional printing.</p>
<BUZZER>	<p><u>ON</u></p> <p>OFF</p>	<p>Enables or disables the printer status buzzer.</p> <p>Buzzer is on. This setting is recommended. The printer beeps to indicate paper outages and other conditions.</p> <p>Buzzer is off.</p>

Table 8-4 HARDWARE options (Continued)

HARDWARE item	Options	Description
<WORD-LG>		To determine the required word length, refer to processor documentation. Select 8-BIT when printing bit-image graphics.
	<u>8 BIT</u> 7 BIT	8-bit word length. Used by most processors 7-bit word length (MSB = 0).
<BUFFER>	NONE	Print buffer                      Download buffer 0 bytes                              28K bytes
	256BYTE2	56 bytes                              127.75K bytes
	2KBYTE2	2K bytes                              126K bytes
	<u>8KBYTE</u>	8K bytes                              120K bytes
	24KBYTE	24K bytes                              104K bytes
	32KBYTE	32K bytes                              96K bytes
	128KBYTE	128K bytes                              0K bytes
		Note: With 128KB selected, the printer cannot accept any downloaded font data.
<INTRFCE>		Selects the type of interface for the computer. This item appears only when the serial board option is installed.
	<u>PARALEL</u>	Centronics parallel interface
	SERIAL	RS-232C serial interface

Serial interface items: The <FORMAT> to <DUPLEX> items are printed only when you select the RS-232C option for the <INTRFCE> item. Be sure that options selected on the printer match the operating system or software. Refer to related documentation.

Setup Mode

Table 8-4 HARDWRE options (Continued)

HARDWRE item	Options	Description
<FORMAT>		Data bits      Parity bit      Stop bits
	<u>8 NONE 1</u>	8                  None                  1
	8 NONE 2	8                  None                  2
	8 EVEN 1	8                  Even                  1
	8 ODD 1	8                  Odd                  1
	7 EVEN 1	7                  Even                  1
	7 ODD 1	7                  Odd                  1
	7 MARK 1	7                  Mark                  1
	7 SPACE1	7                  Space                  1
	7 EVEN 2	7                  Even                  2
7 ODD 2	7                  Odd                  2	
		The data format also includes a start bit. The mark is logical 1. The space is logical 0.
<BAUD-RT>	150	The baud rate is given in bits per second (bps). Select the same baud rate as for the processor or modem.
	300	
	600	
	1200	
	2400	
	4800	
	<u>9600</u>	
	19200	
<PROTOCL>		Indicates the data transmission protocol.
	<u>XON/XOF</u>	DC1 and DC3 codes are used.
	DTR	The Data Terminal Ready signal is used.
	REV-CHL	The Reverse Channel signal is used.
<DSR>	<u>IGNORE</u>	The printer ignores DSR.
	DETECT	The printer ignores DSR.
<DUPLEX>	<u>FULL</u>	Simultaneous data transmission occurs in opposite directions.
	HALF	Data transmission occurs in either direction, but not simultaneously.

**Table 8-4 HARDWRE options (Continued)**

HARDWRE item	Options	Description
<==END==>		Indicates the end of the HARDWRE item list. Press FONT to print the first item, <PPR-OUT>. Press MENU to print the previous item, <DUPLEX> for a serial interface or <INTRFCE> for a parallel interface. Press ONLINE to reprint the <<FUNCTION>> menu.

Note:

Underlined options are the factory default settings.

To change printer hardware options, check that continuous forms are loaded. Then do the following:

1. Enter setup mode.

Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-DUMP
V-ALMNT
```

2. Select HARDWRE.

Repeatedly press LOCK to position the yellow arrow on the print head beneath HARDWRE. Press FONT to select HARDWRE and print the first item and its options.

```
<PPR-OUT>  CNTONLY  DETECT  IGNORE
```

3. Select an option.

Press LOCK to move the yellow arrow to the option. Press FONT to select the option and print the next item.

**Note:**

To print the previous item, press MENU.

4. Repeat step (3) until all required options are changed.

5. Exit HARDWRE.

Press ONLINE to exit the HARDWRE function and reprint the <<FUNCTION>> menu.

6. Either select another function or exit setup mode, saving changes.

To exit setup mode and save changes, check that the yellow arrow on the print head is positioned beneath SAVE&END. Then press FONT or MENU.

### Changing Print Adjustment Options

When printing using ruled paper, use ADJUST to adjust the print position so the printout fits the ruled lines. Use ADJUST to do the following:

- Set the top-of-form.
- Fine-adjust the top-of-form.
- Fine-adjust the left print start column (left margin).
- Adjust for cumulative line-spacing errors on a page.

For the first three tasks ADJUST provides separate items for cut sheets and continuous forms. The last task applies to cut sheets only.

The top edge of paper is the physical top of the page. The logical top of the page, as understood by the printer when loading paper, is called its top-of-form, where printing starts. Printing actually starts at the position obtained by adding the following:

Top-of-form; default value = 1 inch (25.4 mm)

Top margin specified by software

Printer's <TOP-MRG> (top margin) setting; default value = 1 line

Table 8-5 lists ADJUST items and options in the order they are printed. The procedure for changing the top-of-form follows Table 8-5.

Table 8-5 ADJUST options

ADJUST item	Options	Description
<CNT-ORG>	<p>1/6 IN : <u>6/6 IN</u> : 66/6 IN</p>	<p>Sets the top-of-form for continuous forms in 1/6-inch (4.2-mm) increments from the top of the physical page.</p> <p>The default setting is recommended if the top margin is not software specified. 1/6 inch is preferable when the top margin is software specified.</p>
<CNTFINE>	<p><u>0/180</u>, ..., 29/180</p>	<p>Fine-adjusts the top-of-form for continuous forms.</p> <p>Increases the top-of-form in 1/180-inch (0.14-mm) increments.</p>
<CUT-ORG>	<p>1/6 IN : <u>6/6 IN</u> : 66/6 IN</p>	<p>Sets the top-of-form for single sheets in 1/6-inch (4.2-mm) increments from the top of the physical page.</p> <p>The default setting is recommended if the top margin is not software specified; 1/6 inch is preferable when the top margin is software specified.</p>
<CUTFINE>	<p><u>0/180</u>, ..., 29/180</p>	<p>Fine-adjusts the top-of-form for cut sheets.</p> <p>Increases the top-of-form in 1/180-inch (0.14-mm) increments.</p>
<CNT-LFT>	<p>-10/90, ..., <u>0</u>, ..., 10/90</p>	<p>Fine-adjusts the left print start position for continuous forms.</p> <p>Moves the position left or right in 1/90-inch (0.28-mm) increments.</p>

Setup Mode

**Table 8-5 ADJUST options**

<b>ADJUST item</b>	<b>Options</b>	<b>Description</b>
<CUT-LFT>	-10/90, ..., <u>0</u> , ..., 10/90	Fine-adjusts the left print start position for cut sheets.  Moves the position left or right in 1/90-inch (0.28-mm) increments.
<CUT-ADJ>	-22/360, ..., <u>0</u> , ..., +22/360	Compensates for cumulative line-spacing errors resulting from feeding cut sheets 10 inches.  Decreases or increases in 1/360-inch increments.
<==END==>		Indicates the end of the ADJUST item list. Press FONT to print the first item, <CNT-ORG>. Press MENU to print the last item, <CUT-ADJ>. Press ONLINE to reprint the <<FUNCTION>> menu.

Note:

Underlined options are the factory default settings.

Before adjusting a print position, measure the amount of adjustment required for paper preprinted with ruled lines, and thus requiring precise print registration. To adjust a print position, check that continuous forms are loaded. The following procedure adjusts the top-of-form setting for cut sheets.

1. Enter setup mode.

Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed:

```

<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-DUMP
V-ALMNT
    
```

2. Select ADJUST.

Repeatedly press LOCK to position the yellow arrow on the print head beneath ADJUST. Press FONT or MENU to select ADJUST and print the <CNT-ORG> options.

<CNT-ORG>	1/6IN	2/6IN	3/6IN	4/6IN	5/6IN	6/6IN	7/6IN	8/6IN	9/6IN
	10/6IN	11/6IN							

3. Select an option from 1/6 IN to 66/6 IN.

Press LOCK to move the yellow arrow on the print head to the appropriate option. Press FONT to select the option. The <CNTFINE> item is then printed. If the top-of-form must be fine-adjusted, do so now. Otherwise, go to step 4.

4. Exit ADJUST.

Press ONLINE to exit ADJUST and reprint the <<FUNCTION>> menu.

Setup Mode

5. Exit setup mode, saving the top-of-form setting.

Make sure that the yellow arrow is positioned beneath SAVE&END. Then press FONT or MENU.

6. Check the top-of-form setting.

Load paper and print a sample page using software to check adjustment. If necessary, reenter setup mode and fine-adjust the top-of-form by changing the <CNTFINE> option.

**Changing Configuration Options**

CONFIG defines primary printer conditions for the following:

- Tearing off continuous forms
- Autoloading single sheets
- Directly decoding certain commands

Table 8-6 lists CONFIG items and options in the order they are printed. The procedure for changing the printer configuration options follows Table 8-6.

**Table 8-6 CONFIG options**

<b>CONFIG item</b>	<b>Options</b>	<b>Description</b>
<TEAROFF>	<u>MANUAL</u>	Specifies automatic or manual tearoff feed. Automatic tearoff feed is valid for continuous forms only. Tearoff feed can also be performed using the TEAR OFF button.
	AUTO	Automatic tearoff feed is invalid, and tearoff feed must be performed using the TEAR OFF button.
<TEARPOS>	<u>VISIBLE</u>	Specifies the tearoff position. Select this option when the software positions forms at the next top-of-form after printing the last data. The printer performs tearoff feed without adding a form feed when data transfer ends.
	ALWAYS	Select this option when the software stops after printing the last data. The printer performs tearoff feed after adding a forms feed when data transfer ends.  Note: For both settings, tearoff positioning fails if the page length setting does not match the actual perforation spacing.

The <TEAR-EN> item is printed when AUTO is specified for the <TEAROFF> item.

Table 8-6 CONFIG options (Continued)

CONFIG item	Options	Description
<TEAR-EN>	0 sec <u>1 sec</u> 2 sec 4 sec 6 sec	Specifies the offset time when tearoff is enabled. The offset time is measured from when data transfer stops to when the printer performs automatic tearoff feed. If the printer receives data again within the offset time, the printer does not perform automatic tearoff feed. In some application programs, data transfer may stop temporarily because of internal processing. This setting can prevent undesired tearoff feed by causing the printer to wait for up to 6 seconds each time data transfer stops.
<CUTLOAD>	AUTO <u>BUTTON</u>	Specifies how cut sheets are loaded using the front table. Cut-sheet paper is automatically loaded within a certain time after paper is loaded. Cut-sheet paper is loaded by pressing the LOAD button (or LOAD/UNLOAD button).
The <LOADTIM> item is printed when AUTO is specified for the <CUTLOAD> item.		
<LOADTIM>	0.5, <u>1.0</u> , 1.5, 2.0, 2.5, 3.0 SEC	Autoload start time. Autoloading starts when this time passes after cut-sheet loading.
<DECODE>	<u>DIRECT</u>  QUEUED	Specifies the timing of command decoding. The printer decodes certain commands right after receiving data. Example: ESC SUB I, ESC CR P (DPL24C+) ESC Q # (IBM XL24E) The printer decodes commands after storing all data (including commands) in the input buffer. This speeds data reception because the printer needs no decode time during data reception.
<==END==>I		Indicates the end of the CONFIG item list. Press FONT to print the first item, <TEAROFF>. Press MENU to print the previous item, <DECODE>. Press ONLINE to reprint the <<FUNCTION>> menu.

Setup Mode

Note:  
Underlined options are the factory defaults settings.

To change printer configuration options, check that continuous forms are loaded. Then do the following:

1. Enter setup mode.

Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END MENU1 MENU2 HARDWRE ADJUST CONFIG DEFAULT LIST SELF-TST HEX-DUMP
V-ALMNT
```

2. Select CONFIG.

Repeatedly press LOCK to position the yellow arrow on the print head beneath CONFIG. Press FONT to select the CONFIG function and print the <TEAROFF> options.

```
<TEAROFF>      MANUAL  AUTO
```

3. Select an option.

Press LOCK to move the yellow arrow to select an option. Press FONT to select the option and print the next item.

**Note:**

To print the previous item, press MENU.

4. Exit CONFIG.

Press ONLINE and reprint the <<FUNCTION>> menu.

5. Either select another function or exit setup mode, saving changes.

To exit setup mode and save changes, check that the yellow arrow on the print head is positioned beneath SAVE&END. Then press FONT or MENU.

- Turn off the printer.
  - While pressing LOCK, FONT, and MENU, turn the printer on. Continue pressing until the printer beeps.
3. Default values for MENU1 and MENU2 set at shipment

Table 8-3 lists the default values for MENU1 and MENU2 set at shipment. Reset these values using the procedure described here. This procedure does not reset the printer's hardware, printing adjustment, and configuration options.

- Enter setup mode.  
Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END  MENU1  MENU2  HARDWRE  ADJUST  CONFIG  DEFAULT  LIST  SELF-TST  HEX-DUMP
V-ALMNT
```

Setup Mode

- Select DEFAULT.  
Repeatedly press LOCK to position the yellow arrow beneath DEFAULT. Press FONT or MENU to select DEFAULT. The printer reprints the <<FUNCTION>> menu. The default values in MENU1 and MENU2 are now reset.
- Either select new options for MENU1 or MENU2 or exit setup mode, saving the default values set at shipment.  
To exit setup mode and save new default settings, check that the yellow arrow is positioned beneath SAVE&END. Then press FONT or MENU.  
For more information, see "*Changing MENU1 and MENU2 Options*" on page 8-11.

## Using Diagnostic Functions

This section explains how to use the SELF-TST, HEX-DUMP, and V-ALMNT diagnostic functions.

Use these functions to check printing quality and diagnose printer problems. Note that HEX-DUMP is used mainly by programmers.

### Test printing (SELF-TST)

SELF-TST prints test pages to check printer operation independent of the processor. It does not check the interface between the processor and printer.

SELF-TST prints the printer's firmware version number, resident emulations, and all characters available in the currently selected character set. If the DPL24C PLUS emulation is selected for MENU1, printing uses settings currently assigned to MENU1. If Prestige Elite 12 is selected, for example, the test uses Prestige Elite 12.

The following procedure assumes the printer is in setup mode. Check that continuous forms are loaded. Then do the following:

1. Print the <<FUNCTION>> menu.

The <<FUNCTION>> menu should be the last printed line on the page. If it is not printed, press ONLINE. If using HEX-DUMP, press LOCK instead of ONLINE to print the <<FUNCTION>> menu.

```
<<FUNCTION>>
SAVE&END MENU1 MENU2 HARDWRE ADJUST CONFIG DEFAULT LIST SELF-TST HEX-DUMP
V-ALMNT
```

2. Select SELF-TST.

Repeatedly press LOCK to position the yellow arrow on the print head beneath SELF-TST. Then press FONT or MENU. The printer selects SELF-TST and starts printing. A short help menu is printed at the top of the page, followed by the test. Note that the printer does not go online during printing.

3. Check the test page.

To temporarily halt test printing, press FONT or MENU. To resume printing, press FONT or MENU again.

4. Exit SELF-TST.

To exit SELF-TST and remain in setup mode, press LOCK. The <<FUNCTION>> menu is then reprinted.

To exit SELF-TST and return online, press ONLINE. The printer saves any changes you made while in setup mode and returns online.

Another way to start the test is to turn off the printer and then press LF/FF while turning the printer back on. As explained in “Test Printing” on page 8-38, this procedure is convenient when first setting up the printer.

### Hex dump printing (HEX-DUMP)

HEX-DUMP prints data and commands in hexadecimal and abbreviated control code. The character set is IBM character set 2. HEX-DUMP is useful for checking whether the processor is sending the correct commands to the printer and whether the printer is executing commands correctly. It is also useful for debugging software programs.

To print hex dumps, check that continuous forms are loaded. Then do the following:

1. Enter setup mode.

Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END MENU1 MENU2 HARDWRE ADJUST CONFIG DEFAULT LIST SELF-TST HEX-DUMP
V-ALMNT
```

2. Select HEX-DUMP.

Repeatedly press LOCK to position the yellow arrow on the print head beneath HEX-DUMP. Then press FONT or MENU to select HEX-DUMP. The printer goes online and prints a header and a short help menu.

3. Print the hex dump.

To start hex dump printing, send the file or program to the printer. The printer goes online and prints the hex dump. Figure 8-4 shows a sample hex dump.

Setup Mode

Press FONT or MENU to temporarily halt hex dump printing. To resume hex dump printing, press the button again.

**Note:**

When hex dump printing stops, the printer remains online in setup mode (the ONLINE indicator glows green). To print another hex dump, send another file to the printer.

```
*** Hex dump printing ***

BUTTON      ACTION
<ONLINE>    Exit to normal mode
< LOCK >    Return to <<FUNCTION>> mode
< FONT >    Pause/resume printing
< MENU >    Pause/resume printing

0  1  2  3  4  5  6  7  8  9  A  B  C  D  E  F      0123456789ABCDEF
48 65 78 20 64 75 6D 70 20 70 72 69 6E 74 69 6E    Hex dump printin
67 2E 0D 0A 0D 0A 1B 70 01 41 42 43 44 45 46 47    g.000000p00ABCDEF
48 49 4A 4B 4C 4D 4E 4F 50 51 52 53 54 55 56 57    HIJKLMN0PQRSTU0V
58 59 5A 0D 0A 61 62 63 64 65 66 67 68 69 6A 6B    XYZ0000000000000
6C 6D 6E 6F 70 71 72 73 74 75 76 77 78 79 7A 0D    lmnopqrstu0vwxyz0
0A 30 31 32 33 34 35 36 37 38 39 0D 0A 1B 40      #0123456789000000
```

**Figure 8-4 Sample hex dump**

4. Exit the HEX-DUMP function.

To remain in setup mode, press LOCK. The <<FUNCTION>> menu is then reprinted.

To return to online normal mode, press ONLINE. If ONLINE is pressed while the hex dump is printing, printing continues, but the printer switches from hexadecimal format to standard characters.

You can also enter hex dump mode by turning off the printer and then turning it back on while pressing ONLINE and LF/FF. Continue pressing the buttons until the printer beeps.

### Checking vertical print alignment (V-ALMNT)

V-ALMNT corrects vertical character displacement that may occur in bidirectional printing. Characters printed from left to right and right to left become misaligned as follows:

```
|This example shows how printing looks
|when characters are vertically
|misaligned. Note that the left
|margin is not straight.
```

Check that continuous forms are loaded. If possible, use forms at least 356 mm (14 inches) wide to avoid printing on the platen. For letter or A4 size, set WIDTH in MENU1 to 8 inches. See “*Changing MENU1 and MENU2 Options*” on page 8-11. Check and correct vertical alignment as follows:

1. Enter setup mode.

Place the printer offline and then press FONT and MENU simultaneously. Wait for the printer to stop printing and check that the <<FUNCTION>> menu is printed.

```
<<FUNCTION>>
SAVE&END MENU1 MENU2 HARDWRE ADJUST CONFIG DEFAULT LIST SELF-TST HEX-DUMP
V-ALMNT
```

2. Select V-ALMNT.

Repeatedly press LOCK to position the yellow arrow on the print head beneath V-ALMNT. Then press FONT or MENU to select V-ALMNT. The printer starts printing rows of parallel bars at letter-quality speed.

3. Adjust vertical alignment as follows:

Check parallel bars. When they are aligned (not jagged), go to step (4). If they are offset to the left, repeatedly press FONT until the

Setup Mode

bars are aligned. If the bars are offset to the right, repeatedly press MENU until they are aligned.

The first line in the following example is assumed to be printed from left to right:

Bars offset to the left

Bars offset to the right

4. Adjust vertical alignment at correspondence speed.

Press LOCK to switch from letter speed to correspondence speed.

Check bars and adjust as in step (3).

5. Adjust vertical alignment at draft speed.

Press LOCK to switch from report speed to draft speed.

Check bars and adjust as in step (3).

6. Exit V-ALMNT.

Press ONLINE to exit V-ALMNT and save the new vertical alignment settings. The printer exits setup mode and goes back online.

**Note:**

You can also exit setup mode to exit V-ALMNT.

**Figure 8-5** Correct vertical printing alignment

## Setup Mode Reference

The flowchart in Figure 8-6 shows the setup mode for the Fujitsu DPL24C PLUS emulation. Following the flowchart, differences are listed for IBM Proprinter XL24E and Epson ESC/P2 emulations.

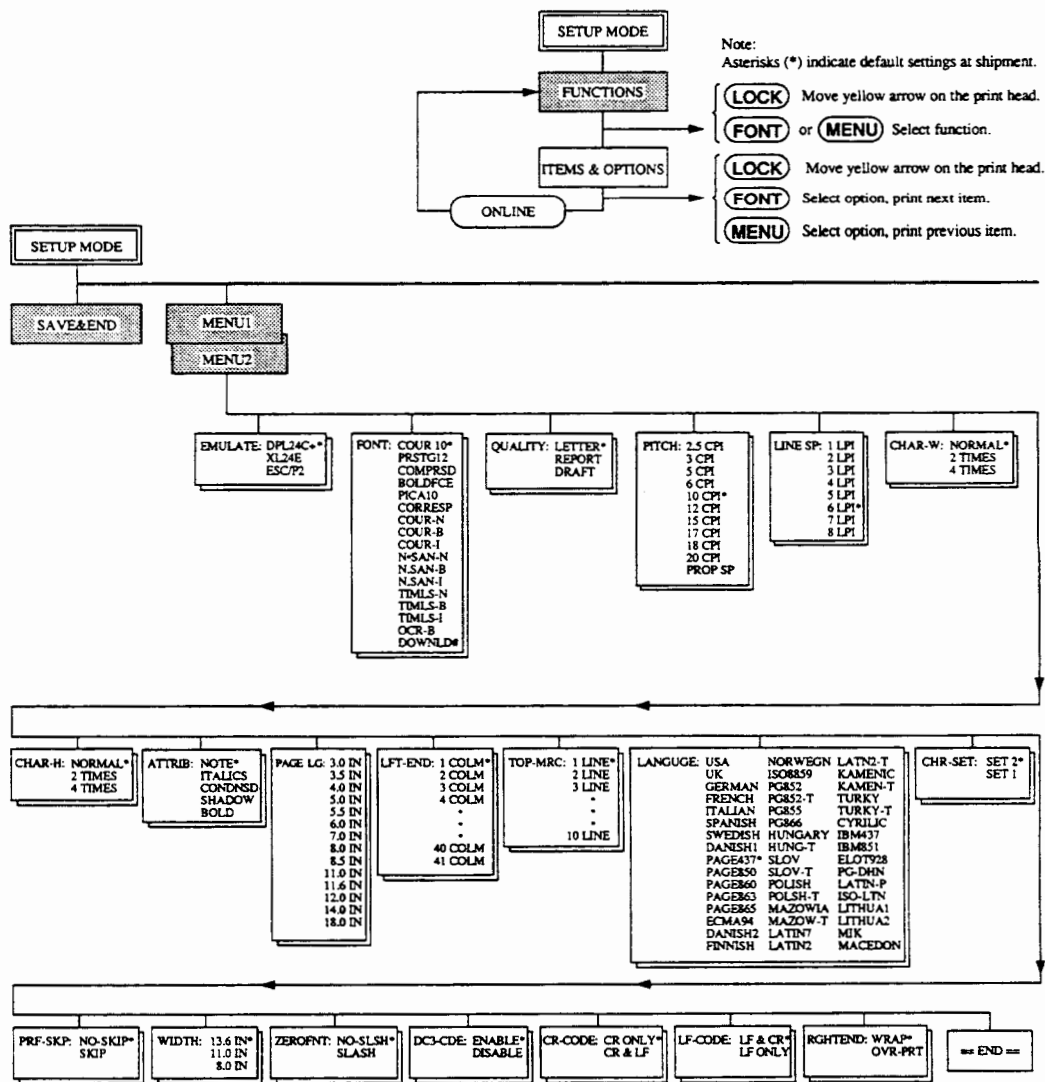

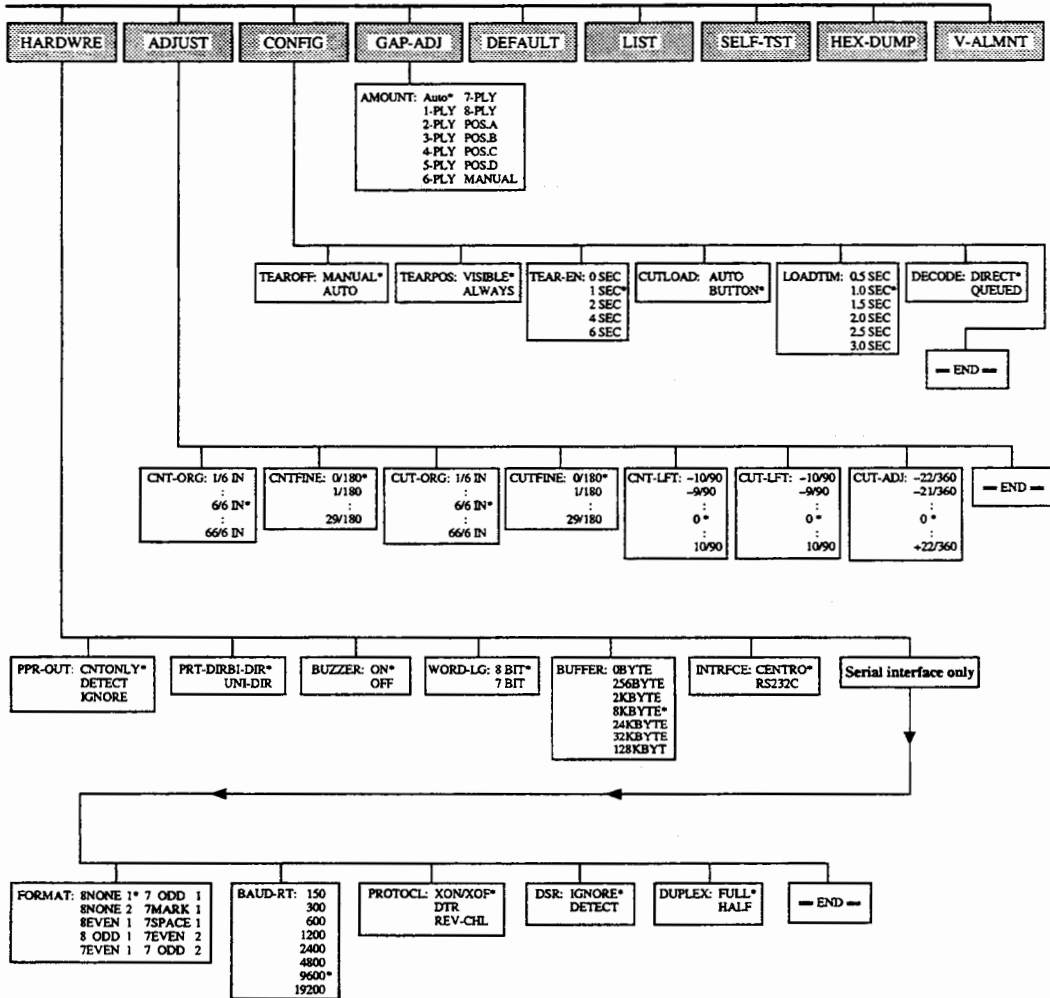

Figure 8-6 DPL24C PLUS emulation

Setup Mode

Figure 8-6 DPL24C PLUS emulation (cont.)

1. Differences in IBM Proprinter XL24E emulation

In the IBM Proprinter XL24E emulation, MENU1 and MENU2 differ from the DPL24C PLUS emulation as follows:

Options:

AGM:

2. Differences in Epson ESC/P2 emulation

In the Epson ESC/P2 emulation, MENU1 and MENU2 differ from the DPL24C PLUS emulation as follows:

ZEROFNT and LF-CODE are not defined.

Options:

## Performing Online Setup

The procedures explained in the preceding sections use offline setup mode. Offline setup mode makes setting printer features one by one from the control panel easier by printing the desired options for checking.

In online setup mode, printer features are set via the processor instead of the printer control panel.

1. Place the printer in online setup mode in one of two ways:
  - Turn off the printer and then turn it back on while pressing MENU. Hold down the button until the printer beeps. (Printers with the LCD control panel can be placed in the online setup mode only in the next way.)
  - Issue printer command ESC e ONLINE. This command is valid in any emulation.
2. Send setup data from the processor in one of three ways:
  - Enter setup data directly from the processor keyboard before starting work. For MS-DOS, hold down Ctrl and type P; data entered from the keyboard is sent directly to the printer. When data entry is complete, hold down Ctrl again and type P. This procedure is useful when you are changing just a few settings.
  - Use an editor to prepare a setup data file and send the file to the printer using a command. For MS-DOS, use the COPY command. This procedure is useful when you are using settings repeatedly.
  - Write a program that enables interactive entry of setup data on the screen. This procedure is the most useful among the three. Check with your dealer regarding the latest available programs.
3. Exit online setup mode by sending EXIT as the last setup data.

For more information on setup data and its format, refer to the programmer's manual for the particular emulation you are using.

Setup Mode

## Notes on Safety

Note the following for safe use of the printer:

1. Dirt

Keep the printer clean and free of obstacles at all times.

Keep liquids, such as water and coffee, and metal objects, such as paper clips and pins, away from the printer.

2. Vibration and impact shock

Protect the printer from excess vibration.

Do not drop or strike the printer in such a way as to cause impact shock.

3. Long-term nonuse

Remove the power cable from the outlet.

4. Cleaning

Clean the outer cover gently with a soft cloth moistened with water or a neutral detergent. Using a solvent such as benzene or thinner or other corrosive substances may damage or discolor the cover.

5. Print head

Before printing, make sure that paper and a ribbon are loaded. Printing without these damages the print head and platen.

Do not touch or force the print head when moving.

Do not turn off power when the print head is moving.

The print head becomes very hot, and should not be touched until it becomes cool.

---

6. Ribbon cassette

A Fujitsu ribbon cassette is recommended. Other cassettes may cause problems in operation or damage the print head. Fujitsu takes no responsibility for print head faults caused by such cassettes.

Ensure that ribbons are not slack.

7. Paper

Store and handle paper carefully.

Avoid storing paper where humidity is high.

8. Installation conditions

Install the printer away from direct sunlight and heat-generating equipment such as heaters.

Install the printer away from very humid places or areas where dust contains oil or iron.

Install the printer on the flat and stable table.

Keep the area around the printer clean.

Keep the printer vent clear.

Check that the platen knob turns smoothly.

To ensure smooth paper feeding, align the edges of the printer and table as shown in Figure 9-1.

After loading, check that continuous forms are straight.

**Figure 9-1** Continuous forms entry and exit

**Figure 9-2 Correct continuous forms loading**

9. Internal lock switch (not available in some countries.)

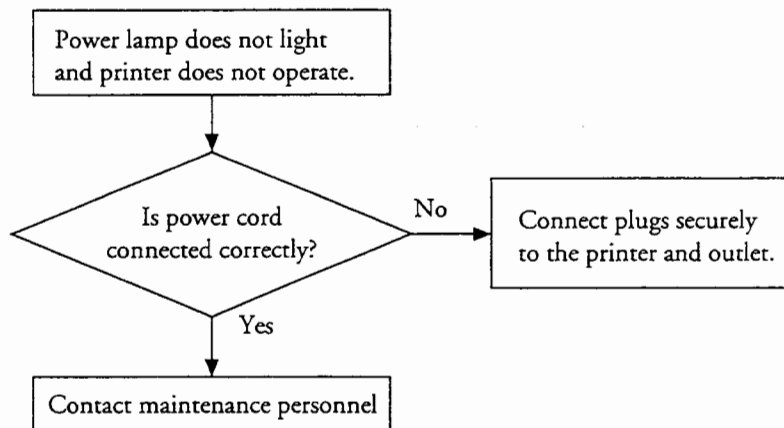

If the top cover is opened during printing, the printer will automatically stop, and the remainder of the print data from the line being printed will be lost. Therefore, do not open the top cover during printing.

Notes on Safety

## Troubleshooting

To troubleshoot printer problems, follow the flowchart.

## Daily Inspection and Maintenance

### Inspection

To maintain stable print quality, check the following before and after printer use:

1. Prework check

Is the area around the printer clean?

Keep the area free of paper clips and dirt that could adversely affect printer operation.

2. Postwork check

Is printer power off? Unplug the power cable from the outlet to be sure.

### Maintenance

Note the following:

Wipe the cover with a damp, not dripping, cloth.

Use a neutral detergent if necessary.

Do not use thinner, alcohol, or other solvents to clean the printer.

## Specifications

Tables 12-1 and 12-2 list the printer specifications, Table 12-3 lists the installation conditions, and Figure 12-1 shows the outside dimensions of the printer.

**Table 12-1 Printer specifications**

Item	Specification	Remarks	
Printing system	24-wire dot matrix		
Printing speed (DL6400)	Letter quality	140 cps	
	Correspondence quality	280 cps	
	Report quality	280 cps	
	Draft quality	420 cps	
Printing speed (DL6600)	Letter quality	180 cps	
	Correspondence quality	360 cps	
	Report quality	360 cps	
	Draft quality	540 cps	
Dot spacing	1/360 inch	Vertical and horizontal	
Print character and number of columns	Pica pitch	136 characters/line	
Character dot configuration (body face)	Letter Quality	24 × 36	Vertical × horizontal
	Draft Quality	24 × 12	Vertical × horizontal

**Table 12-1 Printer specifications (Continued)**

<b>Item</b>		<b>Specification</b>	<b>Remarks</b>
Image printing	Number of print dots	4896 dots/line	
	Vertical and horizontal dot pitch	360 dpi	
	Vertical	Image printing by $n/360$ inch	

**Table 12-2 Paper feed specifications**

<b>Item</b>		<b>Specification</b>	<b>Remarks</b>
Paper feed	Continuous forms	Push-in tractor feed	
	Cut sheets	Friction feed	
Line spacing		1, 2, 3, 4, 5, 6, 7, or 8 lines per inch, programmable in $1/360$ inch or various increments	

**Changing Head Gap Adjustment Options**

This function adjusts the gap between the print head and paper. This function is displayed only when the automatic paper thickness control (APTC) feature is built in.

**Table 8-7 GAP-ADJ option**

GAP-ADJ Item	Options	Description
<AMOUNT>	<u>AUTO</u>	Print head gap specification Automatic setting
	1-PLY 2-PLY 3-PLY 4-PLY 5-PLY 6-PLY 7-PLY 8-PLY POS.A POS.B POS.C POS.D	Settings for 1- to 8-ply paper and auxiliary positions A, B, C, or D are selectable.
	MANUAL	The head gap must be adjusted using the paper thickness lever.
<==END==>		Indicates item termination.

Setup Mode

**Exiting and Saving**

Exit setup mode and save any changes either by exiting setup mode immediately and selecting SAVE&END or by printing before exiting setup mode, selecting SELF-TST, and pressing ONLINE.

Either way, changed settings are saved as the printer's new default settings. These new default settings remain active until they are changed.

**Note:**

The only way to exit setup mode without saving changes is to turn off the printer. Turning the printer back on activates the previous default settings.

To exit setup mode and save changes using SELF-TST, see “*Test Printing (SELF-TST)*” on page 8-38. To exit setup mode and save changes using SAVE&END, do the following:

1. Print the <<FUNCTION>> menu.

The <<FUNCTION>> menu should be the last printed line on the page. If it is not printed, press ONLINE to print it. If using SELF-TST or HEX-DUMP, press LOCK instead of ONLINE.

```
<<Function>>
SAVE&END MENU1 MENU2 HARDWRE ADJUST CONFIG DEFAULT LIST SELF-TST HEX-DUMP
V-ALMNT
```

2. Select SAVE&END.

Check that the yellow arrow on the print head is positioned beneath SAVE&END. Press FONT or MENU to select SAVE&END. The printer exits setup mode and goes back online (the ONLINE indicator glows green). Any changes made in setup mode are saved.

## Resetting Default Values

When resetting the printers default values, default values set at shipment or default values for MENU1 and MENU2 set at shipment make sure to reset as described in the following sections.

1. Default values

Default values activated when power is turned on are saved in the printer's permanent memory. The easiest way to reset them is to turn the printer off and then on. This procedure eliminates changes not to be saved.

2. Default values set at shipment

For a list of the default values set at shipment, see “*Printing a List of Options*” on page 8-8. To reset the default values for all functions, do the following:

**Table 12-3 Installation conditions**

Item		Specification		Remarks
Dimensions	Width	600 mm		
	Depth	300 mm		
	Height	325 mm		
Weight		About 25 kg		
Input power	Voltage	100 to 120 VAC $\pm$ 10%, 220 to 240 VAC +6, -10%		
	Phases	Single		
	Frequency	50/60 Hz +2, -4%		
	Plug specification	Parallel two pins		
Power consumption		100-120VAC	220-240VAC	
	DL6400	Ave. 330VA	Ave. 360VA	
		Max. 790VA	Max. 860VA	
	DL6600	Ave. 390VA	Ave. 420VA	
		Max. 1000VA	Max. 1060VA	
	Heat		Ave. less than 160 Kcal/h	
Permissible temperature and humidity ranges	Installation status	Operating	Not operating	
	Temperature ( $^{\circ}$ C)	5 to 35	0 to 50	Temperature gradient: 15 $^{\circ}$ C/H or less
	Humidity (% RH)	30 to 80	10 to 80	
Accessory cable length		Power cable: 3 m

## Consumables and Options

This appendix lists printer consumables and options. Contact your dealer for information on ordering.

**Table A-1 Consumables**

Consumable	Order number
Ribbon cassette	CA02460-D115
Ribbon subcassette	CA02460-D215
Print head	D86B-1138-C363

**Table A-2 Options**

Options	Order number
Cut-sheet feeder	CA02464-0051 CA02464-0052 <sup>*1</sup>
Rear-sheet feeder	CA02464-0001 <sup>*2</sup>
Rear-sheet feeder secondary bin	CA02464-0031 <sup>*2</sup>
Stacker	CA02464-0081
Rear-feed tractor	CA02464-E602

<sup>\*1</sup> For Canada.

<sup>\*2</sup> For DL6600 only

## Command Sets

This appendix lists commands and parameters.

This printer has three resident command sets:

- Fujitsu DPL24C PLUS, native to Fujitsu DL series printers
- IBM Proprinter XL24E
- Epson ESC/P2

Separate programmer's manuals are available for these emulations.

Select the same emulation on the printer as for the software. If the software supports more than one emulation, including DPL24C PLUS, select DPL24C PLUS for better performance.

**Fujitsu DPL24C PLUS**

This section lists printer commands for the DPL24C PLUS command set native to the printer. Refer to the *Programmer's Manual (DPL24C PLUS)* for information on using commands.

**Table B-1 Printer commands in the DPL24C PLUS command set**

Function	Command
<b>Print Mode Control</b>	
Double-strike (bold) printing on	ESC G
Double-strike (bold) printing off	ESC H
Emphasized (shadow) printing on	ESC E
Emphasized (shadow) printing off	ESC F
Italic printing on	ESC 4
Italic printing off	ESC 5
Select character style and screening	ESC e S ( $n_1$ ) ( $n_2$ )
$n_1 = 0$ : Normal	
1: Outline	
2: Shaded	
3: Outline and shaded	
4: Thin outline	
5: Thin shaded	
6: Thin outline and shaded	
$n_2 = 0$ : Transparent	
1: Light dot matrix	
2: Heavy dot matrix	
3: Vertical bars	
4: Horizontal bars	
5: Slants	
6: Back slants	
7: Lattice	
One-line double-width characters on	SO or ESC SO
One-line double-width characters off	DC 4
Double-width characters on or off (on: $n = 1$ , off: $n = 0$ )	ESC W ( $n$ )
Double-height characters on or off (on: $n = 1$ , off: $n = 0$ )	ESC V ( $n$ )
This command does not adjust the line spacing.	

Table B-1 Printer commands in the DPL24C PLUS command set (Continued)

Function	Command
Multiwidth and height printing $n_1 = 0$ : Not adjusted 1: Character spacing multiplied 2: Line spacing multiplied 3: Character spacing and line spacing multiplied $h_1$ : Tens digit of horizontal multiple $h_2$ : Units digit of horizontal multiple $v_1$ : Tens digit of vertical multiple $v_2$ : Units digit of vertical multiple ( $0 \leq h_1, h_2$ or $v_1, v_2 \leq 16$ )	ESC u ( $n$ ) ( $h_1$ ) ( $h_2$ ) ( $v_1$ ) ( $v_2$ )
Condensed characters on	SI or ESC SI
Condensed characters off	DC2
Subscript or superscript printing on (subscript: $n = 1$ , superscript: $n = 0$ )	ESC S ( $n$ )
Subscript and superscript printing off	ESC T
Select underline type	ESC e U ( $n$ )
$n = 0$ : Single line 1: Bold single line 2: Extremely bold single line 3: Double line 4: Bold double line 5: Extremely bold double line	
Underline on or off (on: $n = 1$ , off: $n = 0$ )	ESC - ( $n$ )
Overline on or off (on: $n = 1$ , off: $n = 0$ )	ESC e o ( $n$ )
Select printing style	ESC ! ( $n$ )
This command combines printing styles. $n$ is the sum of values of styles to be combined. $n = 0$ : Pica 1: Elite 4: Condensed 8: Shadow 16: Bold 32: Double width 64: Proportional	

**Table B-1 Printer commands in the DPL24C PLUS command set (Continued)**

Function	Command
Select image overlay type This command allows you to overlay a pattern on characters. $n =$ 1: Light dot matrix 2: Heavy dot matrix 3: Vertical bars 4: Horizontal bars 5: Slants 6: Back slants 7: Lattice	ESC e I ( $n$ )        ESC e L ( $n$ )
Image overlay printing on or off (on: $n = 1$ , off: $n = 0$ )	
<b>Horizontal Control</b> Space Backspace Carriage return Elite (12 cpi) Pica (10 cpi) Proportionally spaced characters on or off (on: $n = 1$ , off: $n = 0$ ) Set character spacing to $(n - 1)/120$ inch ( $1 \leq n \leq 127$ ) Set character spacing to $n/180$ inch ( $0 \leq n \leq 255$ ) Set character offset to $n/120$ inch Canceled by CR or ESC x. ( $0 \leq n \leq 63$ ) ( $65 \leq n \leq 127$ ) Set character spacing to $n/360$ inch ( $0 \leq n_1 n_2 n_3 \leq 999$ ) $n_1$ , $n_2$ , and $n_3$ are the hundreds, tens, and ones digits.	SP BS CR ESC M ESC P ESC p ( $n$ )  ESC US ( $n$ )  ESC h ( $n$ )  ESC DC1 ( $n$ )  ESC e H ( $n_1$ ) ( $n_2$ ) ( $n_3$ )

Table B-1 Printer commands in the DPL24C PLUS command set (Continued)

Function	Command
<b>Vertical Control</b>	
Line feed	LF
Reverse line feed	ESC LF
Form feed	FF
Advance paper $n/180$ inch ( $0 \leq n \leq 255$ )	ESC J ( $n$ )
Reverse paper $n/180$ inch ( $0 \leq n \leq 255$ )	ESC j ( $n$ )
Advance paper $n/360$ inch ( $0 \leq n_1 \ n_2 \ n_3 \leq 999$ ) $n_1$ , $n_2$ and $n_3$ are the hundreds, tens, and ones digits.	ESC e J ( $n_1$ ) ( $n_2$ ) ( $n_3$ )
Reverse paper $n/360$ inch ( $0 \leq n_1 \ n_2 \ n_3 \leq 999$ ) $n_1$ , $n_2$ , and $n_3$ are the hundreds, tens, and ones digits.	ESC e j ( $n_1$ ) ( $n_2$ ) ( $n_3$ )
Set line spacing to 1/8 inch (8 lpi)	ESC 0
Set line spacing to $n/180$ inch ( $0 \leq n \leq 255$ )	ESC 3 ( $n$ )
Set line spacing to 7/60 inch	ESC 1
Set line spacing to $n/60$ inch ( $0 \leq n \leq 127$ )	ESC A ( $n$ )
Set line spacing to 1/6 inch (6 lpi) or to the value set with the ESC A command. The preset line spacing command is ESC A ( $n$ ).	ESC 2
Set line spacing to $n/360$ inch ( $0 \leq n_1 \ n_2 \ n_3 \leq 999$ ) $n_1$ , $n_2$ , and $n_3$ are the hundreds, tens, and ones digits.	ESC e V ( $n_1$ ) ( $n_2$ ) ( $n_3$ )
Set line spacing to $n/360$ inch ( $1 \leq n \leq 255$ )	FS 3 ( $n$ )

Table B-1 Printer commands in the DPL24C PLUS command set (Continued)

Function	Command
<b>Tabulation</b>	
Horizontal tab execution	HT
Set horizontal tabs $n_1$ to $n_k$ are ASCII values of print columns (at current character width) where tabs are to be set. ( $1 \leq n \leq 255$ ) ( $1 \leq k \leq 255$ )	ESC D ( $n_1$ ) ... ( $n_k$ ) NUL
Move to print column $n$ ( $1 \leq n \leq 255$ )	ESC HT ( $n$ )
Move dot column $n/360$ inch ( $n = n_1 + n_2 \times 256$ ) The value below is for 136-column printers. ( $0 \leq n_1 \leq 255$ ) ( $0 \leq n_2 \leq 19$ ) ( $0 \leq n_2 \times 256 + n_1 \leq 4895$ )	ESC \$ ( $n_1$ ) ( $n_2$ )
Horizontal relative move by $n/360$ inch ( $-999 \leq n_1 \ n_2 \ n_3 \leq +999$ ) $n_1$ , $n_2$ , and $n_3$ are the hundreds, tens, and ones digits of the distance. $s$ is a plus or minus (+ or -) sign.	ESC e R ( $s$ ) ( $n_1$ ) ( $n_2$ ) ( $n_3$ )
Vertical tab execution	VT
Set vertical tabs $n_1$ to $n_k$ ASCII are values of lines (at current line spacing) where tabs are to be set. ( $1 \leq n \leq 255$ ) ( $1 \leq k \leq 64$ )	ESC B ( $n_1$ ) ... ( $n_k$ ) NUL
Move to line $n$ ( $1 \leq n \leq 255$ )	ESC VT ( $n$ )
<b>Page Formatting</b>	
Set right margin ( $0 \leq n \leq 255$ )	ESC Q ( $n$ )
Set left margin ( $0 \leq n \leq 255$ )	ESC I ( $n$ )
Set perforation skip by $n$ lines ( $1 \leq n \leq 127$ )	ESC N ( $n$ )
Perforation skip off	ESC O
Set page length to $n$ lines ( $1 \leq n \leq 127$ )	ESC C ( $n$ ) or ESC e C ( $n$ ) or ESC FF ( $n$ )
Set page length to $n$ inches ( $1 \leq n \leq 22$ )	ESC C NUL ( $n$ ) or ESC e C NUL ( $n$ ) or ESC FF NUL ( $n$ )
Set page length to $n/360$ inch ( $n = n_1 + n_2 \times 256$ ) ( $0 \leq n_1 \ n_2 \leq 255$ ) ( $1 \leq n_1 \times 256 + n_2 \leq 7920$ )	ESC e f ( $n_1$ ) ( $n_2$ )

Table B-1 Printer commands in the DPL24C PLUS command set (Continued)

Function	Command
<b>Character Set Control</b>	
Select character set 1 Appendix D lists character sets.	ESC 7
Select character set 2 Appendix D lists character sets.	ESC 6
Select international character set n = 0: USA 1: France 2: Germany 3: United Kingdom 4: Denmark 1/Norway 5: Sweden/Finland 6: Italy 7: Spain 8: Denmark 2	ESC R (n)
Clear print buffer	CAN
Select printer	DC1
Deselect printer (ignore input)	DC3
Force most significant bit to 1	ESC >
Force most significant bit to 0	ESC =
Cancel control over most significant bit	ESC #
Select code table n = 0: Code page 437 1: Code page 850 2: Code page 860 3: Code page 863 4: Code page 865 5: ISO 8859-1/ECMA 94	ESC e C (n)
Select extended character by character number ( $0 \leq n_1 \leq 3$ , $0 \leq n_2 \leq 9$ , $0 \leq n_3 \leq 9$ ) $n_1$ , $n_2$ , and $n_3$ are the hundreds, tens, and ones digits.	ESC e E ( $n_1$ ) ( $n_2$ ) ( $n_3$ )
<b>Word Processing</b>	
Line justification on	ESC m
Automatically center printing	ESC c
Reset word processing features	ESC x

Table B-1 Printer commands in the DPL24C PLUS command set (Continued)

Function	Command																																																			
<b>Font Selection and Downloading</b> Select font <i>m</i> with source and style set by <i>n</i> <ul style="list-style-type: none"> <li><i>m</i> (bits 0 and 1: Font device selection)                             <table border="1" data-bbox="235 436 894 591"> <thead> <tr> <th>Bit 1</th> <th>Bit 0</th> <th>Selection of font</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>Resident font</td> </tr> <tr> <td>0</td> <td>1</td> <td>Download font</td> </tr> <tr> <td>1</td> <td>0</td> <td>Resident font</td> </tr> </tbody> </table> </li> <li><i>m</i> (bits 2 and 3: Specification of print quality)                             <table border="1" data-bbox="235 697 894 886"> <thead> <tr> <th>Bit 3</th> <th>Bit 2</th> <th>Print quality</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>Original quality of font</td> </tr> <tr> <td>0</td> <td>1</td> <td>Letter quality (360 dpi)</td> </tr> <tr> <td>1</td> <td>0</td> <td>Correspondence quality (180 dpi)</td> </tr> <tr> <td>1</td> <td>1</td> <td>Draft quality (120 dpi)</td> </tr> </tbody> </table> </li> <li><i>n</i> (bit 0 to 2: Specification of font number)                             <p>(1) Resident fonts</p> <table border="1" data-bbox="235 1058 894 1344"> <thead> <tr> <th><i>n</i></th> <th><i>m</i> = 0, 0</th> <th><i>m</i> = 1, 0</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Courier 10</td> <td>OCR-B</td> </tr> <tr> <td>1</td> <td>Prestige elite 12</td> <td></td> </tr> <tr> <td>2</td> <td>Draft</td> <td></td> </tr> <tr> <td>3</td> <td>Compression</td> <td></td> </tr> <tr> <td>4</td> <td>Boldface PS</td> <td></td> </tr> <tr> <td>5</td> <td>Pica 10</td> <td></td> </tr> <tr> <td>6</td> <td>Correspondence</td> <td></td> </tr> </tbody> </table> </li> </ul>	Bit 1	Bit 0	Selection of font	0	0	Resident font	0	1	Download font	1	0	Resident font	Bit 3	Bit 2	Print quality	0	0	Original quality of font	0	1	Letter quality (360 dpi)	1	0	Correspondence quality (180 dpi)	1	1	Draft quality (120 dpi)	<i>n</i>	<i>m</i> = 0, 0	<i>m</i> = 1, 0	0	Courier 10	OCR-B	1	Prestige elite 12		2	Draft		3	Compression		4	Boldface PS		5	Pica 10		6	Correspondence		ESC % ( <i>m</i> ) ( <i>n</i> )

<b>Function</b>	<b>Command</b>
Condensed characters on	SI or ESC SI
Condensed and elite characters off	DC2
Subscript or superscript printing on (subscript: $n = 1$ , superscript: $n = 0$ )	ESC S ( $n$ )
Subscript and superscript printing off	ESC T
Underline on or off (on: $n = 1$ , off: $n = 0$ )	ESC - ( $n$ )
Overline on or off (on: $n = 1$ , off: $n = 0$ )	ESC_( $n$ )
<b>Horizontal Control</b>	
Space	SP
Backspace	BS
Carriage return	CR
Elite characters on	ESC :
Proportionally spaced characters on or off (on: $n = 1$ , off: $n = 0$ )	ESC P ( $n$ )
<b>Vertical Control</b>	
Line feed	LF
Form feed	FF
Advance paper $n/216$ inch ( $1 \leq n \leq 255$ )	ESC J ( $n$ )
Advance paper $n/180$ inch (in AG mode) ( $1 \leq n \leq 255$ )	ESC J ( $n$ )
Set line spacing to 1/8 line	ESC 0
Set line spacing to 7/72 inch	ESC 1
Set line spacing to $n/216$ inch ( $0 \leq n \leq 255$ )	ESC 3 ( $n$ )
Set line spacing to $n/180$ inch (in AG mode) ( $0 \leq n \leq 255$ )	ESC 3 ( $n$ )
Preset line spacing to $n/72$ inch ( $1 \leq n \leq 255$ )	ESC A ( $n$ )
Preset line spacing to $n/60$ inch (in AG mode) ( $1 \leq n \leq 255$ )	ESC A ( $n$ )
Set line spacing to 1/6 inch or to the value preset by line spacing command ESC A ( $n$ )	ESC 2
Change graphics line spacing base to 1/216 or 1/180 inch (for ESC J and ESC 3) $m_1 = 4, m_2 = 0$ $0 \leq t_1 \leq 255, 0 \leq t_2 \leq 255, t_3 = 0, t_4 = 180$ or 216	ESC [ \ ( $m_1$ ) ( $m_2$ ) ( $t_1$ ) ... ( $t_4$ )

Table B-3 Printer commands for the IBM Proprinter XL24E emulation (Continued)

Function	Command
<b>Tabulation</b>	
Horizontal tab execution	HT
Set horizontal tabs	ESC D ( $n_1$ ) ... ( $n_k$ ) NUL
The values of $n_1$ to $n_k$ are ASCII values of the print columns (at the current character width) where tabs are to be set.	
( $1 \leq n \leq 255$ ) ( $1 \leq k \leq 28$ )	ESC D NUL
Clear all horizontal tabs	ESC d ( $n_1$ ) ( $n_2$ )
Move print position right by $n/120$ inch	
( $0 \leq n_1, n_2 \leq 255$ ) ( $n = n_1 + n_2 \times 256$ )	VT
Vertical tab execution	ESC B ( $n_1$ )...( $n_k$ ) NUL
Set vertical tabs	
The values of $n_1$ to $n_k$ in this command are the ASCII values of the lines (at the current line spacing) where tabs are to be set.	
( $1 \leq n \leq 255$ ) ( $1 \leq k \leq 64$ )	ESC B NUL
Clear all vertical tabs	ESC R
Reset tabs to default values	
<b>Page Formatting</b>	
Set left margin at column $n$ and right margin at column $m$ ( $0 \leq n, m \leq 255$ )	ESC X ( $n$ ) ( $m$ )
Set perforation skip to $n$ lines ( $1 \leq n \leq 255$ )	ESC N ( $n$ )
Perforation skip off	ESC O
Set page length to $n$ lines ( $1 \leq n \leq 255$ )	ESC C ( $n$ )
Set page length to $n$ inches ( $1 \leq n \leq 22$ )	ESC C NUL ( $n$ )
Set top of form	ESC 4

Command Sets

**Table B-4 Printer commands for the Epson ESC/P2 emulation (Continued)**

<b>Function</b>	<b>Command</b>
<b>Miscellaneous</b>	
Sound bell	BEL
Move print head to home position	ESC <
Unidirectional printing on or off (on: $n = 1$ , off: $n = 0$ )	ESC U ( $n$ )
Initialize printer	ESC @
Enter online setup mode*	ESC e ONLINE ( <i>data</i> )

\*1 The value depends on the pitch set by the ESC ( U command.

## Interface Information

The printer communicates with a processor through either a Centronics parallel interface or a pre-installed add-on RS-232C serial interface. The printer cannot use both interfaces at the same time.

This appendix provides information on wiring interface cables or programming for processor-to-printer communications. To simply connect the printer and processor, read the instructions in Chapter 2, “*Setting Up the Printer.*”

### Parallel Interface

The Centronics parallel interface is the industry standard. The cable connector at the printer should be a shielded Amphenol DDK 57FE-30360 or equivalent.

The following table lists the connector pin assignments. Note the following:

- “Input” indicates a signal sent to the printer from the processor.
- “Output” indicates a signal sent from the printer.
- Return lines specified in the “Return pin number” column represent twisted pairs, with one side connected to signal ground.
- The standard signal levels are 0.0 to +0.4 V for low and +2.4 to +5.0 V for high.

**Table C-1** Parallel interface

Pin number	Return pin number	Signal	Direction	Description
1	19	Data Strobe (DSTB)	Input	Strobe pulse for reading data. The printer reads data when this signal is low. The pulse width must be 1 $\mu$ s or more at the receiving terminal.

Interface  
Information

## Parallel Interface

Table C-1 Parallel interface (Continued)

Pin number	Return pin number	Signal	Direction	Description
2-9	20-27	Data 1 to 8	Input	Data 1 to 8 signals correspond to parallel data bits 1 to 8. Data 8 (pin 9) is the most significant bit, but it is not used in 7-bit ASCII communications. All signals indicating that data is logical 1 should go high at least 1 $\mu$ s before the falling edge of the Data Strobe signal and must stay high for at least 1 $\mu$ s after the rising edge.
10	28	<u>Acknowledge</u> (ACK)	Output	Pulse signal indicating the printer has received data and is ready to accept more data items. This signal is also issued when the printer is switched from offline to online.
11	29	Busy	Output	Data cannot be received when this signal is high. This signal goes high during data entry, when the printer is offline, when the buffer is full, or when an error occurs.
12	30	Paper Empty (P E)	Output	This signal goes high when the printer is out of paper.
13	—	Select (SLCT)	Output	This signal indicates the selected (online) state when high and the deselected (offline) state when low.
14	—	<u>Auto Feed XT</u> (AFXT)	Input	Not used
15	—	—	—	No connection
16	—	Signal Ground	—	Logic ground level (0 V)
17	—	Frame Ground	—	Printer chassis ground line. FG and SG are connected.

Table C-1 Parallel interface (Continued)

Pin number	Return pin number	Signal	Direction	Description
18	—	—	—	No connection
9–30	—	Signal Ground	—	Twisted-pair return lines
31	—	Input Prime (INPRM)	Input	If this signal is low for more than 50 $\mu$ s, the printer is reset and placed online.
32	—	Fault	Output	This signal goes low when the printer is offline, paper has run out, or a printer error is detected.
33	—	Signal Ground	—	Logic ground level (0 V)
34	—	—	—	No connection
35	—	+5 VR	Output	Pulled up to +5 V through a 3.3 k $\Omega$ resistor
36	—	SLCT-IN	Input	Not used

## Data Transmission Timing

The Centronics interface guarantees received data when the Data and Data Strobe signals from the processor have the following timing for Busy and Acknowledge signals from the printer:

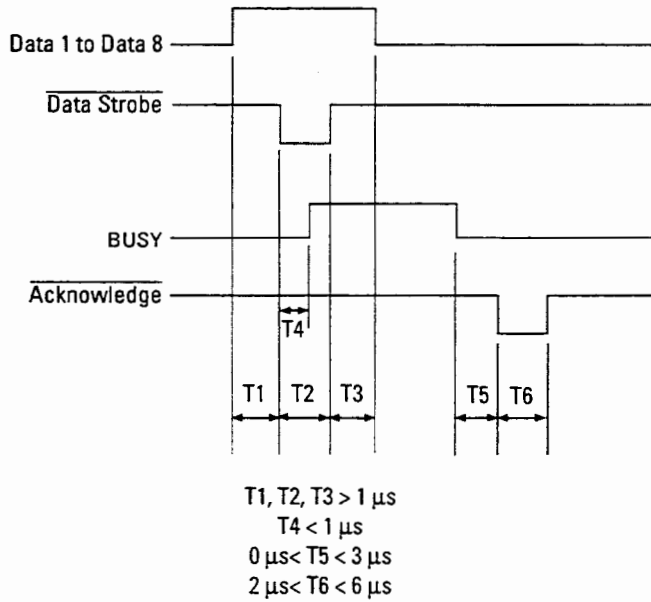

Figure C-1 Data transmission timing

## Serial Interface

RS-232C is the standard serial interface for data terminal equipment (DTE). The cable connector at the printer should be a D-subminiature Cannon or Cinch DB-25P pronged connector or equivalent conforming to EIA standards.

The following table shows pin assignments commonly used by most processors.

Note the following:

- “Input” indicates a signal sent to the printer from the processor.
- “Output” indicates a signal sent from the printer.
- The signal level for mark (logical 1) is  $-3$  V or lower; for space (logical 0), it is  $+3$  V or higher.

**Table C-2** Serial interface

Pin number	Signal	Direction	Description
1	FG	—	Frame Ground
2	TD	Output	Transmitted Data. This pin carries information from the printer to the processor.
3	RD	Input	Received Data. This pin carries information from the processor to the printer.
4	RTS	Output	Request To Send. Spaces are sent when the printer is ready to transmit data.
5	CTS	Input	Clear To Send. Spaces are sent when the processor is ready to receive data.
6	DSR	Input	Data Set Ready. Spaces are sent when the processor is turned on and ready.
7	SG	—	Signal Ground (common return)
8	CD	Input	Data Carrier Detect. Spaces are sent when the processor lets the printer receive data.
11	RC	Output	Reverse Channel. This signal is used in the RC protocol only. Spaces are sent when the printer is ready to send or receive data.
20	DTR	Output	Data Terminal Ready. Spaces are sent when the printer is turned on and ready.

**Serial Options**

The serial options listed here must be set up the same way on both the processor and the printer. By using the printer control panel, the processor operating system, or software, you can change selectable options.

- Transmission mode: Asynchronous, full duplex, or half duplex (selectable)
- Speeds: 150, 300, 600, 1200, 2400, 4800, 9600, or 19200 baud (selectable)
- Data bits: 7 or 8 bits (selectable)
- Parity bit: Odd, even, mark, space, or none (selectable)
- Start bit: 1 bit
- Stop bit: 1 or 2 bits (selectable)
- Protocol: XON/XOFF (DC1/DC3), DTR (Data Terminal Ready), RC (Reverse Channel), or ETX/ACK (selectable)
- Buffer size: 256, 2K, 8K, 24K, 32K, or 128K bytes (selectable)

## Cable Wiring

The printer allows two types of serial communication control: DSR enabled and DSR disabled. The type used is determined by processor requirements and affects the way the interface cable is wired. To select between DSR-enabled and DSR-disabled control, use the printer **HARDWARE** function (see “*Changing Hardware Options*” on page 8-24 and in subsequent sections).

DSR-disabled control offers simpler cabling and communication than DSR-enabled control. It can be used for interfacing with an IBM or most other PCs. With DSR-disabled control, input control signals DSR, CTS, and CD are always considered high, regardless of their actual status. Therefore, a wire connection for these pins is not required. The following figure below shows the wiring required for connection to an IBM PC.

# Open wire

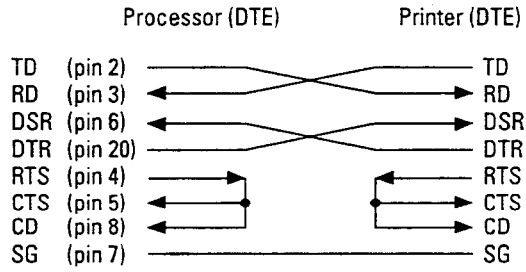

Wire ① is unnecessary for the DTR (or RC) protocol.

Some computers may not require wire ②.

**Figure C-2 Cable wiring (DSR disabled control)**

DSR-enabled control enables communication with an RS-232C interface. The CTS and DSR input control signals are enabled; CD is ignored. DSR must be high when the printer receives data. If the printer has data to be transmitted, it transmits data immediately when both DSR and CTS are high.

For connection to a data communications equipment DCE device using DSR-enabled control, use a straight-through cable. For connection to a data terminal equipment DTE device, use a null-modem cable as shown here.

**Figure C-3 Cable wiring (DSR-enabled control)**

## Serial Protocols

A protocol is a set of instructions that control the way data is transmitted between devices such as a processor and printer. The protocol ensures that the processor does not send information to the printer faster than the data can be processed. By telling the processor when it can receive data, the protocol prevents the printer buffer from overflowing.

This printer offers a choice of four protocols: XON/XOFF, DTR, RC, and ETX/ACK. The following table gives details. If no particular protocol is recommended, try DTR.

**Table C-3 Serial protocols**

Protocol	Description
ON/XOFF (DC1/DC3)	When the printer is ready to receive data, it sends the XON (DC1) code (hex 11). When fewer than 255 bytes of space remain in the buffer, or when the printer is switched offline, the printer sends the XOFF (DC3) code (hex 13). The processor must stop transmitting data within 255 (63) characters of receiving XOFF, or information may be lost.
DTR (hardware)	The DTR signal on interface cable pin 20 controls the flow of data rather than sending a character code.
RC	Same as DTR except that it uses the Reverse Channel signal (pin 11) instead of the Data Terminal Ready signal (pin 20).
ETX/ACK	This protocol is a little more complicated, but allows faster throughput under some conditions. The processor adds the End of Text ETX character (hex 03) at the end of each block of print data. The block, including the ETX character, is usually half the printer input buffer, but it can be as large as the input buffer. The processor must stop transmitting the next block of data until it receives the ACK character, or information may be lost. Data transmission continues until the printer finishes printing two blocks, providing high-throughput data communication.

# Character Sets

## 1. Basic character sets for DPL24C PLUS and IBM XL24E emulation

The two basic character sets for the DPL24C PLUS command set and the IBM Proprinter XL24E emulation are shown below. These are USA character sets. Character set 2 is the same as code page 437 in IBM PS/2 character sets. Characters in boxes differ for sets 1 and 2. Those of set 2 also vary with the national character set.

IBM PC character set 1

Character sets

### 3. National character sets available for all emulations

The 37 national character sets available for all emulations are shown below. They support different characters and symbols specific to different languages. Note that these tables are for a resident Courier 10 font. Some national character sets do not have some characters and symbols and may not be usable depending on resident fonts. See item (6) for details.

Character Sets

6. Restrictions on national character sets supported in all emulations

In all emulations, this printer supports 37 national character sets for characters and symbols specific to different languages. Some national character sets, however, do not have specific characters and symbols and may not be usable, depending on resident fonts. The following table shows which resident fonts are supported for each national character set:

Resident font		Courier 10	Elite 12	Compress	Draft	Bold PS	Pica 10	Courier 01 *1	Timeless *1	Nimbus Sans *1	Correspondence	OCR-B Sans

## Using the LCD Type Control Panel

There are two types of printer control panels, the LED (light-emitting diode) lamp type and LCD (liquid-crystal display) type.

With the LED lamp type control panel:

- Status or error information is represented by on/off states of the LED lamps or, in some cases, by their combinations.
- Setup information is printed on paper.
- Functions of push buttons are determined individually or by certain combinations of two buttons.

With the LCD type control panel:

- Status or error information is represented by 48 characters of numerals, letters, and symbols displayed on the LCD screen.
- Setup information is also displayed on the LCD screen.
- Functions of some push buttons are programmable by firmware and displayed on the LCD.

The body of this manual describes operations and functions using the LED type control panel. This appendix describes operations of the LCD type control panel focusing on:

- Basic printer operations
- Setup menu operations

Since the printer's control panel is used to control most printer operations, read the entire first section to familiarize yourself with the control panel if your printer is equipped with the LCD type control panel. Then, go to the other section as required.

This appendix does not generally repeat the descriptions and procedures which are common with or similar to those of the LED lamp type control panel. It does not describe individual operations, but gives basic information necessary for everyday printer operations using the LCD type control panel.

**Getting Acquainted with the Control Panel**

This section is subdivided into three parts concerning basic printer operations:

- Control panel components
- Overview of menus
- Using the basic menus

**Control panel components**

The LCD type control panel has the following components:

- Six indicator lights
- A 24-character x 2-line display
- Eight push buttons

The following figure shows the layout of the LCD type control panel, followed by a description of each component:

**Figure E-1 LCD type control panel**

## Indicator lights

Indicator	Meaning
POWER	Indicates printer power is on.
ONLINE	Indicates the printer is online and printing or ready to print.
ALARM	Indicates an error has occurred. The LCD also shows an error message. The alarm may also sound.
FRICTION	Indicates cut sheets can be used.
FRONT TRACTOR	Indicates continuous forms can be used with the front tractor.
REAR TRACTOR	Indicates continuous forms can be used with the optional rear tractor.

The above three indicators are switched cyclically by pressing the PAPER PATH button during offline.

## LCD screen

The printer's menus and status or error messages appear on a two-line display. Push buttons F1, F2, and F3, located beneath the display, are used to select menu options. Basic everyday menu options are described later.

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

On the top line of the display, short messages appear to guide you in using the printer. A status or error message is always displayed after you take some action, such as turning the printer on or pressing F1, F2, or F3. Status messages displayed during normal printer operation and error messages are listed in the section "Messages" on page E-22 in this appendix.

**Push buttons**

<b>Push buttons</b>	<b>Function</b>
ONLINE	Switches the printer online or offline.
F1, F2, and F3	Scrolls through printer's menu items to select setup functions, items, and options. Other specific functions are assigned by the setup functions selected.
↓↑	The invert arrows button reverses the direction of the up or down arrows shown on the display. For example, pressing this button changes the forward line feed to reverse line feed.
NEXT DISPLAY	Displays the printer's four basic menus.
LOAD/ UNLOAD	Loads paper to the top-of-form position for printing. Unloads (retracts) continuous forms paper to the tractor or ejects cut-sheet paper.
PAPER PATH	Selects the friction, front tractor, or optional rear tractor for feeding paper.

## Overview of menus

The printer has two types of menus.

- Basic menus
- Setup menus

The basic menus allow you to select frequently used printer options. These menus allow you to feed paper, select fonts, print quality, and character pitch, and reset the printer. In addition, one of the basic menus allows you to enter setup mode.

The setup menus – available in setup mode – allow you to specify the printer's default operating parameters (also called power-on defaults). These menus allow you to set the printer's hardware conditions, top-of-form position, and various print characteristics. You can also perform some other special functions, such as printing a list of current parameter settings. To use the setup menus, see the section called "Using the Setup Menus" on page E-13 in this appendix.

## Points to remember about basic menus

- You can use basic menus while the printer is either online or offline.
- The changes you make using basic menus are temporary. The changes are not saved in the printer's permanent memory. (To permanently change the printer's default settings, use the SAVE function. See "Example of Operations" on page E-15 in this appendix.)

## Using the basic menus

The following section shows the printer's four basic menus.

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

- Executes form feeds.
- Advances continuous forms paper to the tear-off edge, then retracts paper to the original position (rear feeding only).
- Executes line feed.

Reset printer	Micro ↑ feed	Line ↑ feed
------------------	-----------------	----------------

- Resets the printer.
- Executes micro line feed.
- Executes line feed.

<Font> ↑ COUR 10	<Qual> ↑ LETTER	<Pitch> ↑ 10 CPI
---------------------	--------------------	---------------------

- Displays currently selected font, quality, and pitch.
- Changes font, quality, and pitch.

Enter setup	<Menu> MENU1	<Lock> OFF
----------------	-----------------	---------------

- Enters setup mode.
- Selects setup menu 1 or 2.
- Enables or disables lock mode. With lock mode on, the printer ignores font commands from your application software and keeps on using the font, quality, and pitch selected in the previous basic menu.

Basic operations of buttons in the basic menus are as follows:

- To display each of the four basic menus, repeatedly press the NEXT DISPLAY button.
- To select options from the basic menus, press the F1, F2, and F3 buttons and the ↓↑ (invert arrows) button. Items enclosed by less than and greater than signs (< >) involve options.
- To execute functions, press the F1, F2, and F3 buttons. Items not enclosed by < > mean functions.

## Executing a form feed or a line feed

To execute a form feed or line feed:

1. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.
2. Check the direction of the arrow displayed on the menu. If the arrow points up ↑, paper feeds forward. If the arrow points down ↓, paper feeds backward. To invert the arrows, press the ↓↑ button.

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

3. Press F1 to feed paper forward (or backward) by the page. As the paper moves forward (or backward) on the platen, the control panel will briefly display the page length, as shown right.

Page length = 11.0 inch		
feed	paper	feed

Press F3 to feed paper forward (or backward) by the line. As the paper moves forward (or backward) on the platen, the control panel will briefly display the new line count, where 001 is the first print line (top-of-form).

Line count = 002		
feed	paper	feed

This example indicates that the paper is positioned to start printing at the second print line.

## Executing a micro line feed

To execute a micro line feed (1/180 inches per step):

1. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.
2. Check the direction of the arrow displayed on the menu. If the arrow points up ↑, paper feeds forward. If the arrow points down ↓, paper feeds backward. To invert the arrows, press the ↓↑ button.
3. Press F2 to feed paper forward (or backward) by small increments (or decrements) of 0.14 mm (1/180 inches). As the paper moves forward (or backward) on the platen, the control panel will

Reset printer	Micro ↑ feed	Line ↑ feed
------------------	-----------------	----------------

Offset(n/180") = +008		
feed	paper	feed

briefly display the offset from a particular line using the range (+127 to -128).

This example indicates an offset of +8/180 inches from the currently selected print line.

### **Tearing off continuous forms**

To execute a form feed or line feed:

1. Make sure the printer has stopped printing. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.
2. Press F2 to advance the forms to the tear-off edge. The control panel displays the prompt message shown at the right.
3. Tear off the continuous forms.
4. Press any button on the control panel to retract the continuous forms back to the original position. The original menu is redisplayed.

Form ↑ feed	<b>Tear off paper</b>	Line ↑ feed
----------------	---------------------------	----------------

<b>Tear off paper and press any button</b>
--

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

### **Resetting the printer**

To reset the printer:

1. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.
2. Press F1. The confirmation message shown at the right appears.
3. In response to the confirmation, press F3 to reset the printer. If you decide not to reset, press F1.

After the printer is reset, the original basic menu is redisplayed.

<b>Reset printer</b>	Micro ↑ feed	Line ↑ feed
--------------------------	-----------------	----------------

<b>RESET: Are you sure?</b>	
No	Yes

<b>Now resetting</b>
----------------------

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

**Note:**

The following are reset:

- Line buffer data
- Input buffer data
- Mechanical positions
- Top-of-form position

The following remain in effect:

- Settings of menu 1 or 2, font, quality, pitch, and lock on or off by the control panel
- Settings by the LOAD ADJ function in setup mode
- Downloaded data

### Changing font, quality, and pitch temporarily

This is useful to change font, quality, and pitch temporarily from power-on defaults. Any changes you make are active until the power is turned off. (Use setup mode to change permanently.) To change temporarily:

1. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.

<Font>↓ COUR 10	<Qual>↓ LETTER	<Pitch>↓ 10 CPI
--------------------	-------------------	--------------------

The bottom line displays abbreviations of the current font, quality, and pitch settings. In the menu shown above, the current settings are

- Courier 10 font
- Letter quality
- 10 CPI (characters per inch)

2. Look at the arrows displayed in the top line of the display. If the arrows point up, press ↓↑ to reverse the arrows. In the following steps, it is assumed that the arrows point down.

3. Press F1 repeatedly to scroll through the various font options, selecting each in turn. The last selection wraps around to the first selection.

- Courier 10
- Prestige 12
- Compressed printing
- Boldface PS
- Pica 10
- Correspondence
- OCR-B 10
- Courier normal 10 (outline)
- Courier bold 10 (outline)
- Courier italic 10 (outline)
- Nimbus Sans normal PS (outline)
- Nimbus Sans bold PS (outline)
- Nimbus Sans italic PS (outline)
- Timeless normal PS (outline)
- Timeless bold PS (outline)
- Timeless italic PS (outline)
- Downloaded font #1
- Downloaded font #2

<Font>↓ <b>PICA 10</b>	<Qual>↓ <b>LETTER</b>	<Pitch>↓ <b>10 CPI</b>
---------------------------	--------------------------	---------------------------

If you want to scroll upward, press ↓↑ to reverse the arrows.

4. Press F2 repeatedly to scroll through the various print quality options, selecting each in turn:

- Letter
- Report
- Draft

<Font>↓ <b>PICA 10</b>	<Qual>↓ <b>REPORT</b>	<Pitch>↓ <b>10 CPI</b>
---------------------------	--------------------------	---------------------------

5. Press F3 repeatedly to scroll through the various character spacing options, selecting each in turn:

<Font>↓ PICA 10	<Qual>↓ REPORT	<Pitch>↓ 12 CPI
--------------------	-------------------	--------------------

- 10 CPI, 12 CPI, 15 CPI, 17 CPI, 18 CPI, 20 CPI, PROP SP (proportional spacing), 2.5 CPI, 3 CPI, 5 CPI, and 6 CPI

After these changes, the printer prints characters with pica 10 font, report quality, and 12 cpi so long as the computer commands do not change these options or you do not switch the menu (1 or 2) in the basic menus.

**Note:**

Generally, actually printed font, quality, and pitch can differ from those displayed in this menu since the options displayed are independent from those specified by commands from the computer.

**Selecting MENU 1 or MENU 2**

You can easily select either of the two setup menus on which you can make different settings in advance while in setup mode.

1. Make sure the printer has printed all data. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.
2. Press F2 to switch the menu.
3. The printer is initialized two seconds later. The original basic menu is redisplayed.

Enter setup	<Menu> <b>MENU1</b>	<Lock> OFF
-------------	------------------------	---------------

Enter setup	<Menu> <b>MENU2</b>	<Lock> OFF
-------------	------------------------	---------------

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

**Note:**

Print data buffer is cleared even if the last selected menu is the same as the original.

### Enabling or disabling lock mode

The lock mode protects the control panel-selected font from being changed by commands from your application software. To enable the lock mode:

1. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.

Enter setup	<Menu> MENU1	<Lock> OFF
-------------	-----------------	---------------

2. Press F3 to switch the option from OFF to ON.

Enter setup	<Menu> MENU1	<Lock> ON
-------------	-----------------	--------------

Lock mode ON remains in effect until the power is turned off. It is not disabled by initializing or resetting the printer or by changing the emulation.

### Entering setup mode

You can make different settings in advance by entering setup mode. There are many menus in setup mode.

1. Make sure the printer has printed all data. Press NEXT DISPLAY repeatedly until the menu shown at the right appears.
2. Press F1 to enter setup mode. The setup mode opening message shown at the right appears for two seconds.

Enter setup	<Menu> MENU1	<Lock> OFF
-------------	-----------------	---------------

If unprinted data remains in the buffer, the confirmation message shown at the right appears before the opening message.

<b>Offline setup mode</b>		
---------------------------	--	--

Pressing F1 returns to the original menu (step 1). Pressing F3 clears the data and makes the printer enter setup mode (next step).

<b>Data will be lost. OK?</b>		
No		Yes

3. The setup mode initial menu appears.

Func. ↓ MENU1	Item ↓ EMULATE	Option ↓ DPL24C*
------------------	-------------------	---------------------

### **Exiting setup mode**

You can exit setup mode in the following two ways:

- Use the EXIT FROM SETUP function in setup mode to return to the setup mode initial menu.
- Press the ONLINE or NEXT DISPLAY button to return to the first basic menu.

In either case, if any options are changed, a confirmation message which makes you decide whether or not new options are to be saved in non-volatile memory.

## **Using the Setup Menus**

### **Using the control panel buttons in setup mode**

With the LED type control panel, setup functions, items, and options to be selected are printed on paper. You can select or execute the desired ones by positioning the red mark on the print head carriage at them, using the ONLINE, FONT, MENU, and LOCK buttons.

With the LCD type control panel, setup functions, items, and options are displayed on a 24-character x 2-line LCD where the screen is divided into three parts in which functions, items, and options are displayed respectively. These three parts also correspond to the F1, F2, and F3 buttons beneath the LCD. You can select or execute desired functions, items, and options using these three buttons according to self-explanatory messages on the usage of buttons.

The organization of setup functions, items, and options are common between the two types of control panels. Abbreviated names of functions, items, and options to be printed or displayed are also common. See Chapter 8 for information on common items.

This section describes the basic operations which are common in setup mode. It does not describe all operations in setup mode, but describes some typical operations in detail because the self-explanatory messages are not likely to be confusing.

### **Conventions**

#### **Selecting options**

This section is for the MENU1, MENU2, HARDWRE, ADJUST, CONFIG, and GAP-ADJ (option) functions the purpose of which are to select or change printer operating options for printing.

#### ***Three partitions of the screen and F1, F2, F3 buttons***

As indicated in “*Setup Mode Reference*” on page 8-44, there are many functions, items, and options in setup mode. To make the display suit the hierarchical structure of setup mode and to make the operation of buttons easy, the screen is divided into three parts, each displaying functions, items, and options from the left. You can easily select a

desired option by selecting a function using F1, an item using F2, and an option using F3 in this sequence.

The selections are not in effect until they are saved.

### ***ONLINE, ↓↑, and NEXT DISPLAY buttons***

During selection, the functions of the three buttons are as follows:

- Press the ONLINE or NEXT DISPLAY button to exit setup mode and return to the original basic menu.
- Press the ↓↑ button to reverse the direction of the arrows displayed in partitions of the screen.

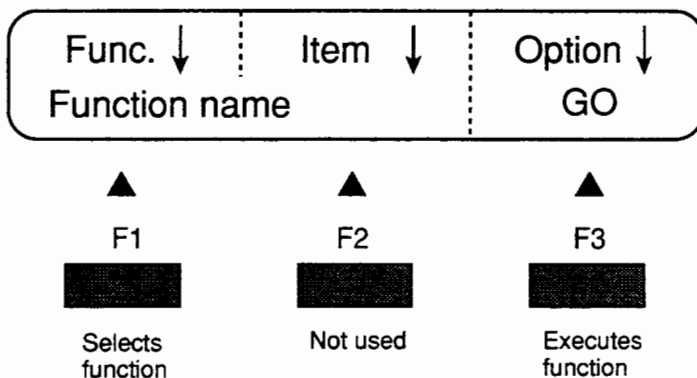

### **Starting functions**

This section is for the SAVE, LIST, LOAD DEFAULTS, SELF-TEST, HEX DUMP, V-ALIGNMENT, and EXIT FROM SETUP functions the purpose of which is to save the changed options, list the current options, diagnose the printer, and so on.

### ***F1, F2, F3 buttons***

For the above functions, there are no items and options to be selected. Select a function using F1. In the lower line of the screen, the function name is displayed and “GO” is displayed above the position of F3. (The upper line of the screen retains the setup mode initial menu.) The following is an example.

Press F3 to start the function. The function is executed or its specific prompt message is displayed for the next operation.

### ***ONLINE, ↓↑, and NEXT DISPLAY buttons***

After the function is started, the functions of the three buttons are as follows:

- Press the ONLINE or NEXT DISPLAY button to exit setup mode and return to the original basic menu. When the HEX DUMP function is executed, this button is used to switch the printer between online and offline.
- The ↓↑ button is not used.

### **Example of operations**

This section describes typical functions in setup mode so that you can understand operations of all other functions. The following functions are described:

- MENU1 or MENU2
- SAVE and EXIT FROM SETUP
- SELF-TEST
- V-ALIGNMENT

## Selecting options in MENU1 or MENU2

See “*Setup Mode Reference*” on page 8-44 to find where functions, items, and options are assigned in setup menus. The following example shows how to select (not change in this stage) the print quality from letter to draft to speed printing using MENU1. It also shows how to scroll forward and backward through the setup menus.

1. Enter setup mode. If MENU1 is not displayed under Func., press F1 until it appears.
2. Press F2 until QUALITY appears under Item.  
An asterisk (\*) appears next to each default option.
3. Press F3 until DRAFT appears under option.

Func. ↓	Item ↓	Option ↓
<b>MENU1</b>	EMULATE	DPL24C+*

Func. ↓	Item ↓	Option ↓
MENU1	<b>QUALITY</b>	LETTER*

Func. ↓	Item ↓	Option ↓
MENU1	QUALITY	<b>DRAFT</b>

DRAFT print quality is now selected. To use DRAFT in printing, save it. If you are running through setup operations, go to the SAVE function.

### Scrolling the menu

- To scroll forward fast through the setup functions, items, or options, press and hold down F1, F2, or F3. The last selection wraps around to the first selection.
- To scroll backward when you pass the desired function, item, or option, press the ↓↑ button to make the arrows on the display point up (↑) and press repeatedly. To scroll fast, press and hold down F1, F2, or F3. The first selection wraps around to the last selection.

### Saving the changed options

There are three methods of saving the changed options. Choose one of the following:

- Use the SAVE function.
- Use the EXIT FROM SETUP function.
- Press the ONLINE or NEXT DISPLAY button.

With the first method, the printer remains in setup mode after saving, allowing you to use different functions in setup mode. With the other methods, the printer exits from setup mode and returns the display to the original basic menu after saving.

If you made changes while in setup mode, the printer prompts you to save the changes. You can save changes permanently or temporarily. Permanent changes become the printer's new default settings. Temporary changes are lost when the printer is turned off.

Go to the SAVE function when you come from the previous exercise on the MENU1 function.

**SAVE function**

The SAVE function permanently saves the changed options if they differ from the previous ones. It is used when you want to select another function after saving. To use the SAVE function, follow these steps:

1. The printer is should be in mode. If you just completed the previous exercise, the printer is in setup mode with the menu shown at the right.

Func. ↓ MENU1	Item ↓ QUALITY	Option ↓ DRAFT
------------------	-------------------	-------------------

2. Press F1 until SAVE appears under Func..

Func. ↓ SAVE	Item ↓	Option ↓ GO
-----------------	--------	----------------

3. Press F3 to execute the SAVE function. If the changed options differ from the previous ones, the save execution message briefly appears, indicating the changed options are now permanently saved.

<b>NOTE: Values have been permanently saved.</b>
--

Then the original SAVE menu is redisplayed. If they are the same, only the original SAVE menu is redisplayed.

Func. ↓ SAVE	Item ↓	Option ↓ GO
-----------------	--------	----------------

4. You can select another function.

Go to the SELF-TEST function when you come from the exercise on the SAVE function.

**EXIT FROM SETUP function or ONLINE or NEXT DISPLAY button**

When this function or button is used, the printer prompts you to permanently or temporarily save the changed options if they differ from the previous ones. It is used when you want to return the printer normal offline after saving. To do so, follow these steps:

1. The printer should be in setup mode with the menu shown at the right. (There are two steps to proceed.)
2. • Press F1 until EXIT FROM SETUP appears under Func..  
Press F3 to execute the EXIT FROM SETUP function. The prompt message shown at the right appears.  
• Press ONLINE or NEXT DISPLAY. The same prompt message appears.
3. • Press F1 to use the changed options temporarily. The save execution message shown at the right briefly appears.  
The changed options are now temporarily saved.  
• Press F2 to use the changed options permanently. The other save execution message, shown at the right, briefly appears.  
The changed options are now permanently saved.
4. The original basic menu is redisplayed.
5. You can place the printer online.

Func. ↓ XXXXX	Item ↓ XXXXX	Option ↓ XXXXX
------------------	-----------------	-------------------

Func. ↓ <b>EXIT FROM SETUP</b>	Item ↓	Option ↓ GO
-----------------------------------	--------	----------------

<b>EXIT: Use temporarily?</b>		
USE	SAVE	Not-exit

<b>EXIT: Use temporarily?</b>		
USE	SAVE	Not-exit

**NOTE: Values are lost if power is turned off.**

**NOTE: Values have been permanently saved.**

Enter setup	<Menu> MENU1	<Lock> OFF
-------------	-----------------	---------------

### Printing the self-test

This section describes how to start self-test printing from setup mode. This is a convenient way to check print quality after making adjustments using the GAP-ADJ or V-ALIGNMENT function.

To start the self-test, load paper in the printer. Then follow these steps:

1. Enter setup mode. If you just completed the previous exercise on the SAVE function, the printer is in setup mode with the menu shown at the right.
2. Press F1 until SELF-TEST appears under Func..
3. Press F3 to select GO. Self-test starts with the self-test execution message shown at the right.
4. Press F2 to stop self-test printing. Press F3 to re-start self-test printing.
5. Press F1 to exit self-test mode, and return to the SELF-TEST menu.
6. Press ONLINE to exit setup mode. The basic menu is redisplayed.

Func. ↓ SAVE	Item ↓	Option ↓ GO
-----------------	--------	----------------

Func. ↓ SELF-TEST	Item ↓	Option ↓ GO
----------------------	--------	----------------

<b>Self-test printing</b>		
EXIT	STOP	GO

Func. ↓ SELF-TEST	Item ↓	Option ↓ GO
----------------------	--------	----------------

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

## Correcting vertical character displacement

This section describes how to use the V-ALIGNMENT function. V-ALIGNMENT is used to correct the vertical character displacement that sometimes occurs with bidirectional printing. Printing from left to right becomes misaligned with printing from right to left, resulting in erratic-looking print lines.

To start the alignment, load paper wider than 381 mm (15 inches). Then follow these steps:

1. Enter setup mode.
2. Press F1 until V-ALIGNMENT appears under Func..
3. Press F3 to select GO. The vertical alignment execution message shown at the right appears and the printer prints alternate rows of vertical bars.  
 Bars are printed from left to right, then from right to left, initially at letter quality speed.
4. Check the offset of the left-to-right bars against the right-to-left bars. If the offset is to the left, press F2 to increase the offset. If the offset is to the right, press F3 to decrease the offset. Check again the offset several seconds later. Continue this step until the bars are correctly aligned.
5. Press F1 to change SPEED to Correspondence. Then repeat step 4.
6. Press F1 to change SPEED to Draft quality. Then repeat step 4.
7. Press ONLINE or NEXT DISPLAY to stop printing and return to the V-ALIGNMENT menu. (You can select another function.)

Func. ↓ MENU1	Item ↓ EMULATE	Option ↓ DPL24C+*
------------------	-------------------	----------------------

Func. ↓ <b>V-ALIGNMENT</b>	Item ↓	Option ↓ GO
-------------------------------	--------	----------------

<b>Vertical alignment: xx</b>		
SPEED	INCR	DECR

Func. ↓ V-ALIGNMENT	Item ↓	Option ↓ GO
------------------------	--------	----------------

## Power-on Special Functions

8. Press ONLINE to save the settings. The prompt message shown at the right appears.

<b>EXIT: Use temporarily?</b>		
USE	SAVE	Not-exit

9. Press F1 for temporary use and F2 for permanent use.

The original basic menu is redisplayed after a save execution message.

Form ↑ feed	Tear off paper	Line ↑ feed
----------------	-------------------	----------------

### Power-on Special Functions

Table E.1 lists functions which are established by pressing specific control panel buttons while turning the power on. The ONLINE and F1 to F3 buttons are used. Keep buttons pressed until the buzzer sounds. Do not use any other combinations of buttons. If you make a mistake (the printer displays a message not listed below), turn the power off without any affirmative response to a message.

**Table E-1 Power-on special functions**

ONLINE	F1	F2	F3	Function	Initial message
x				Vertical alignment printing	Vertical alignment print
	x			Self-test printing	Self-test print
		x		Demonstration printing	DEMO pattern printing
	x	x		Hexadecimal dump printing	Hex dump mode
	x	x	x	Option listing	Setup values listing

**Messages****Status messages**

Table E.2 lists messages displayed by the printer during normal operation. The messages are listed alphabetically.

**Table E-2 Printer status messages**

Message	Meaning
Data will be lost. OK? No            Yes	Data remains in the print buffer. If you do not need the data, select Yes (press F3).
DEMO pattern printing STOP      GO	The printer is printing or ready to print a demo pattern page. Press F2 to pause printing. Press F3 to start or restart printing.
ERROR! Use this button to invert arrows on LCD.	You have used the ↓↑ button incorrectly. Use ↓↑ to reverse the direction of the arrows shown on the display. You cannot use this button to change the direction of the NEXT DISPLAY button.
EXIT: Use temporarily? USE SAVE Not-exit	The SAVE or EXIT function was selected in setup mode. Press F1 to use the changed options temporarily (until the power is turned off). Press F2 to use permanently. Press F3 to return to the initial setup menu.
Factory values are set!	The LOAD DEFAULTS function was selected in setup mode and the printer's factory defaults have been reset in MENU1 and MENU2.
HEX dump mode EXIT	The printer is in setup mode and is printing in hexadecimal. Press F1 to exit.
Internal test	The printer is performing its internal hardware test. This message appears for two seconds immediately after the printer is turned on.
Line count = xxx	This message appears briefly when a line feed is executed. It indicates the new line position for printing, where line 001 is the top-of-form position.
Loading/Unloading paper	The printer is loading paper to the print position or unloading paper to the tractor.

**Table E-2 Printer status messages (Continued)**

<b>Message</b>	<b>Meaning</b>
NOTE: Values are lost if power is turned off.	This message appears when you exit setup mode by selecting USE, which means the changes you made are saved temporarily. When you turn the printer off, the changes are lost.
NOTE: Values have been permanently saved.	This message appears when you exit setup mode by selecting SAVE, which means the changes you made are saved permanently, becoming the printer's new power-on defaults.
Now resetting	The printer is clearing its print buffer and resetting itself for printing.
Offline setup mode	This message appears briefly when you enter setup mode using the control panel. It indicates the opening message of offline setup mode.
Offset (n/180") = xxxx	This message briefly appears when a micro line feed is executed. It indicates the offset from the current print line in units of 1/180 inch, where xxxx is -128 to +127.
Online setup mode	This message appears while the printer is set in setup mode by a command from the computer. It indicates the opening message of online setup mode. The status appears in the lower line of the display.
Page length = xx.x inch	This message appears briefly when a form feed is executed. It indicates the length of paper moved per form feed.
Paper still remains	In unloading continuous forms, paper was not retracted all the way to the tractor. Tear off the continuous forms.
Printing	The printer is online and printing.
RESET: Are you sure? No                    Yes	The printer is ready to reset itself. Press F3 to reset the printer. Buffer is cleared.
Save top adjust now!	This message briefly appears when the adjusted top-of-form position is permanently saved in the printer. Line 001 is set at the current position on the page.

Table E-2 Printer status messages (Continued)

Message	Meaning
Self test printing EXIT STOP GO	The printer is printing or ready to print its self-test pattern, used to check print quality. Press F1 to exit selftest. Press F2 to pause printing. Press F3 to start or restart printing.
Setup values listing	The printer is printing a page listing its currently set default values.
Tear off paper and press any button	This message appears when Tear off paper is selected from the control panel. After tearing off the continuous forms, press any button on the control panel to retract the paper to top-of-form.
TOP ADJ: xx/6 IN + xx/180 MICRO↑ EXIT SAVE	This message appears for seven seconds when the printer loads paper while offline. It indicates the top-of-form (line 001) position from the top edge of the paper by the sum of a multiple of 1/6 inch and a multiple of 1/180 inch. You can adjust the top-of-form by using ↓↑ and F1 while this message is displayed. Press F2 for temporary use and F3 for permanent use.
Vertical alignment: xx SPEED INCR DECR	The printer is printing the vertical bar pattern used to check alignment between forward and backward printing. Press F1 to change print quality (speed). Press F2 (increment) and F3 (decrement) to adjust the alignment of forward printing. To stop printing, press the ONLINE or NEXT DISPLAY button.

### Error messages

Many of the printer's messages are informational. They are intended to guide you in using the printer. Since these messages are self-explanatory and require no corrective action, they are not included below.

This section lists two types of error messages and gives possible solutions:

- Messages indicating user-correctable problems
- Messages indicating fatal errors

When you see an error message, first check Table E.3 for whether it indicates a problem you can correct. If not, check the list of fatal error messages.

### Messages indicating user-correctable problems

Messages indicating user-correctable problems fall into two categories:

- Operational error messages
- Warning error messages

#### *Operational error messages*

An operational error message indicates a problem you can correct immediately. Printing stops after the current line and

- The ALARM indicator turns red.
- The printer goes offline.
- The alarm sounds (unless deactivated in setup mode).

The printer remains offline until the error is corrected. The operational error message appears in the upper line of the display while the lower line retains the previous contents. The following is an example of paper outage detected during a form feed or line feed:

feed	Out of paper paper	feed
------	-----------------------	------

**Warning error messages**

A warning error message indicates an interface or data format error while online. The printer remains online and printing does not stop, but the following happens:

- The ALARM indicator turns red.
- An alarm sounds (unless deactivated in setup mode).

The following example indicates a buffer control error on the serial interface:

The message remains displayed until the printer is placed offline and the error condition is corrected. Table E.3 lists messages alphabetically.

**Table E-3 Messages indicating user-correctable problems**

Message	Meaning and solution
Buffer overflow	The print buffer fails to accept data. The data is discarded. Check all parameters for the serial interface.
Cover is open	The top cover is open or removed. Printing stops. Close the top cover.
Download format error	The download buffer has overflowed or received wrong format data. The data is discarded. Reduce the amount of download data, reduce the size of the input buffer to prepare more space for download data, or check the format of download data.
Framing error	The printer has received data in an incorrect format. Data is replaced by "?." Check the FORMAT and BAUD RT settings in setup menus or check the interface cable.
Out of paper	The printer is out of paper. Install paper and press LOAD/UNLOAD. To resume printing, press ONLINE.
Out of paper or jam	The cut sheet feeder is out of paper, or a paper jam has occurred. Remove the jam, if any. Install paper and press LOAD/UNLOAD. To resume printing, press ONLINE.
Parity doesn't match	The printer has received data with a incorrect parity. The data is replaced by "?." Check the interface cable.

### Messages indicating fatal errors

Fatal errors other than “Jam lever open” cannot be corrected. Fatal errors include serious mechanical or electrical problems that prevent the printer from operating. Printing stops immediately and

- The ALARM indicator blinks red.
- The ONLINE indicator turns off (the printer goes offline).
- An alarm sounds.

A fatal error message cannot be cleared. Usually, the printer does not restart. When a fatal error occurs, call repair service. The upper line of the display shows FATAL!. The messages are listed alphabetically below:

FATAL! Low voltage
-----------------------

- CSF motor driver
- Fan doesn't work
- Jam lever open (To correct, turn power off, close the jam lever, and turn power back on.)
- Left end sensor
- LF motor driver
- Low voltage
- Overload
- Paper too thick
- Print head driver
- RAM read/write
- Resident ROM sum (The ALARM indicator does not light and an alarm does not sound.)
- Ribbon motor driver
- SP motor driver
